APPENDIX 3 – VERSION CONTROL	112

1. Introduction

The Victorian Electricity Supply Industry (VESI) Skills and Training Guideline has been developed to establish the minimum standards for Qualifications and competency assessment / refresher training for field workers working in the VESI.

2. Purpose

The purpose of the VESI Skills and Training Guideline is to:

- provide an agreed standard common to all VESI Network Operators
- specify the minimum Qualification and competency assessment / refresher training requirements for access to the VESI Networks
- provide an agreed set of learning outcomes and assessment criteria for VESI specified training and where applicable be consistent with Nationally endorsed Competency Standard Units (CSU's)

3. Scope

This guideline applies to Network Operators, Contractors and their sub-contractors working on the Distribution & Transmission Networks in Victoria.

4. VESI Skills and Training Matrix

There are two skills and training matrixes which set out the minimum requirements for workers working on, near, or in the vicinity of the VESI Networks, the matrixes are:

- VESI skills and training matrix
- VESI Vegetation skills and training matrix

The requirements outlined in this guideline and the Skills & Training matrixes are the minimum qualification and competency assessment / refresher training requirements for VESI workers working on or near Distribution & Transmission Networks in Victoria and therefore, apply to Network Operators their contractors and sub-contractors. These matrixes and any specific Network Operator requirements shall be referenced whenever training is required for existing or new workers. All training shall be in place prior to work being performed unless specified in this guideline or by the Network Operator.

Where there is a change in a National Qualification and/or Competency Standard Unit name or code the Skills & Training matrixes will be updated to reflect this change. Registered Training Organisation's (RTO's) are required to update their scope of registration to meet Australian Qualification Framework (AQF) requirements including teach out timeframes. Previous National Qualifications and Competency Standard Unit equivalents will still be recognised and where the training requires competency assessment / refresher training, this assessment / training will meet the requirements of the new or updated unit.

The roles identified in the matrixes are those that are commonly used in the VESI. The descriptions of each of the roles are identified in Appendix 1 of this guideline.

Where a person performs multiple roles (e.g. Lineworker, HV Switching Operator) they shall undertake the mandatory training for each of those roles.

Network Operators may determine further competency assessment / refresher training, authorisations, and induction requirements for a specific role.

Where training for roles not identified in the matrix or where additional tasks are required these requirements should be established with the Network Operator.

5. Training Frequency

The workers training shall be current at all times and each subject shall be re-assessed prior to the frequency specified in the matrixes.

Where training cannot be achieved within the designated timeframe the employer is to consult with the relevant Network Operator/s.

6. Qualifications

All workers shall be Qualified, if applicable, for the role they are undertaking. All Qualifications should meet the Australian Qualification Framework (AQF) requirements or previous equivalent. For the evidence to be equivalent it shall consist of a record of qualification previously issued by a State Government or Enterprise e.g. SECV that was applicable in that jurisdiction (this may be supported by evidence of training results and/or work history). This evidence of qualification shall be reviewed and verified by the Network Operator.

Where a Qualification has been gained interstate or overseas the employer shall follow the requirements of the VESI Guideline for Interstate and Overseas Qualified workers and workers reentering the workforce.

Under no circumstances shall non-qualified persons undertake work that requires a Qualification.

7. Electrical Licensing

All applicable workers shall be licenced for the work activity they are undertaking. Electrical Licensing is administered by Energy Safe Victoria (ESV), please refer to the ESV <u>website</u> for Licensing information.

8. High Risk Work Licensing

A high-risk work licence allows you to work with certain high-risk equipment and plant. In Victoria this is administered by WorkSafe Victoria. It is expected that only licence holders operate plant or perform tasks that are stipulated by a high-risk licence.

As the licence has an expiry date, all licences must be current prior to work on or near the network.

9. Delivery of Training

The following principles shall be applied in the delivery of training:

- All initial National Competency Standard Units shall be delivered by a Registered Training Organisation (RTO) whose scope of registration includes the required competencies and the trainer is able to demonstrate vocational competence and experience in the subject matter. All RTOs shall meet the standards as outlined in the Australian Quality Training Framework (AQTF).
- Competency assessment / refresher training can be delivered by persons with a valid Certificate IV in Training and Assessment (or equivalent) or hold the following two skill sets:
 - Facilitation Skills set including the following units;
 - TAEDES412 Design and develop plans for vocational training (Core)
 - TAEDEL411 Facilitate vocational training (Core)
 - Assessor Skills set including the following units;
 - TAEDES411 Use nationally recognised training products to meet vocational training needs (Core)
 - TAEASS412 Assess competence (Core)
 - TAEASS413 Participate in assessment validation (Core)

Delivery of Training or assessment for units of competence must be delivered working under an RTO whose scope of registration includes the required competencies, and the trainer is able to demonstrate vocational competence and experience in the subject matter. The requirements for the delivery of training by an RTO are specified in Appendix 2 - Training Modules / Competency Standard Units.

Training which is not nationally endorsed shall be delivered by a person who holds as a
minimum a valid Certificate IV in Training and Assessment or equivalent which meets
current ASQA requirements and is able to demonstrate vocational competence and
experience in the subject matter of the training they are delivering.

Note: In circumstances where the training is being undertaken to meet multiple clients e.g. interstate Network Operators and VESI, it is the employer's responsibility to ensure with the Training Provider, that the training and certificate / Statement of Attainment (SOA) outcomes cover all of their client requirements.

10. Training and Assessment Requirements

The STRC has established standard training and assessment requirements for the training identified in the matrixes. The selection of National Competencies and modules in <u>Appendix 2</u> is based on an individual's role and relative to the work being performed.

The training modules are written for competency assessment / refresher training and where identified the module can be used for initial training. The competency assessment should include all assessment criteria unless otherwise stated.

Where a module descriptor or CSU is used for initial training, consideration shall be given to other pre-requisites / competencies required.

Training Providers shall ensure that they can deliver the training outcomes and criteria as per Appendix 2 – Training Modules / Competency Standard Unit of this guideline and have available the appropriate plant, tools, and equipment for the worker to demonstrate competency.

Where the Assessment criteria refers to a VESI document (e.g. Fieldworker Handbook), Network Operator or Employer procedure; that document or procedure should be utilised. Employers should ensure: -

- That the training provider they engage is familiar with all such procedures.
- Training providers include reference to the appropriate procedures in there training delivery.

11. Apprentices & Trainees

It is acknowledged by the STRC that initial training e.g. Trade school (TAFE) for Apprentices and Trainees may not start for a period of time after employment.

VESI specific training for the role may be incorporated in this initial training (e.g. Lineworker) and therefore may lead to a delay in the apprentice / trainee having the required competencies to access the field.

Where VESI mandatory training is not incorporated in the initial / Tafe training for the role (e.g. Electrician, Protection Tester), the VESI training shall be completed within two months of employment.

In these circumstances to enable the apprentice and/or trainee to enter the field under direct supervision the Minimum Access Requirements below shall be adhered to until the required VESI training is completed.

At all times during the term of an Apprenticeship / Traineeship, the apprentice / trainee shall be under Direct, General or Broad Supervision as defined in the VESI Supervision Guidelines for the applicable role.

Minimum Access Requirements for first year apprentices and trainees:

- Have completed training in the National competency Prepare to Work safely in the construction industry (White card or equivalent) - CPCCWHS1001 Hold an ESI worker's card
- Undertake a Network Operator Induction
- Shall not undertake any task (e.g. working aloft in an EWP) until the required training is completed (e.g. EWP escape).
- Shall not work on or near live apparatus
- Be under the Direct Supervision of a trade worker at all times

After having successfully completed the initial training, it is the responsibility of the employer to ensure that Apprentices / Trainees complete the competency assessment / refresher Training applicable to their role as per the matrixes.

12. Records / Evidence

Where a National Competency Standard Unit is identified in this guideline / matrix for initial training a Statement of Attainment shall be issued by the RTO meeting ASQA requirements.

Where competency assessment / refresher training is based on a Competency Standard Unit or a VESI training module the evidence required is a training record.

Training records could include a current copy of a training report, a Statement of Attainment, or a certificate of completion. This evidence shall include the following:

- Individual's Name
- Training Provider Name
- Training course name as per the VESI Skills and Training matrix
- Course completion
- Date competency achieved
- Trainer and/or Training Provider signature

Note: Records that indicate attendance only will not be accepted.

All records shall be verified in the ESI worker system in alignment with the business rules.

13. ESI Worker System

ESI worker is a program which provides an industry-consistent record of an individual's Qualification, training, authorisations, and network inductions to work in the Victorian Electricity Supply Industry (VESI).

The ESI Worker system applies to all VESI workers who:

- hold an authority issued by a Victorian Network Operator; and/or
- are required by a Victorian Network Operator to undertake any training and/or assessment for field-based activities consistent with the VESI Skills and Training matrix

All employers will ensure that their employee's, contractors, and sub-contractors who meet these criteria are compliant for their role/s in the ESI worker system.

To seek further information on the ESI worker system and access user guides please refer to the ESI Worker website.

14. Continuous Improvement

Suggestions for improvement to this guideline can be submitted via the <u>Contact Us</u> link on the VESI Skills and Training webpage. Suggestions will be considered by the STRC for incorporation.

Any changes to this document can only be made by consensus agreement between the Network Operators.

15. Definitions

Equivalent	A situation where a learning framework and outcome from one period of time is treated as equal to a current training outcome, e.g. a pre-AQF state or enterprise-based certificate of proficiency is treated as equal to a current qualification. It is important to note, that the specifics of the learning may not be the same, but the trade qualification outcomes are treated as equal. The primary purpose of the equivalency rule, is to ensure that workers trained under previous systems are not unfairly treated in the current AQF environment.
Refresher training	Training to compensate for or prevent deterioration in a previously achieved standard of performance. Usually undertaken at a set frequency.
Telecommunication corridor	The area greater than 1000mm below bare overhead LV Network Operator assets or 2000mm below bare overhead HV Network Operator assets
The Blue Book	Code of Practice on electrical safety for the work on or near high voltage electrical apparatus
The Green Book	Electrical Safety Rules for the VESI Distribution Networks
Workers	Employees, Contractors, and Sub-contractors of a Network Operator.

Appendix 1 – Skills and Training Matrix Role Descriptions

Roles of Worker		Description of Work			
Asset Inspector		Engaged in asset inspection, pole testing and data capture			
Auditor	General	Engaged in Quality (Asset) and Compliance (HS&E) Field Auditing Can include Drone operators not engaged in performing the Asset Inspection role			
	Underground	Engaged in Quality (Asset) Auditing of Underground Infrastructure			
Cable Hauler		Engaged in the laying of LV &/or HV underground mains cables			
Cable Jointer		Engaged in the laying & Jointing of LV & HV cables and carrying out Live LV cable jointing			
Civil Worker		A person undertaking civil work not in a Zone/Terminal substation environment Could include but not limited to workers undertaking trenching, laying LV service cable etc.			
Civil Worker - Zone and Terminal Substations		A person undertaking civil work in a Zone and/or Termina Substation Could include but not limited to workers undertaking trenching, concreting, building works etc.			
	HV/LV Enclosures	Engaged in the installation and/or maintenance of Fibre Optic Cable and/or Communication equipment and/or Supervisory Control and Data Acquisition (SCADA) equipment for the VESI Network Operator in an enclosure			
Communication worker	Pole work	Engaged in the installation and/or maintenance of Fibre Optic Cable and communication equipment in the Telecommunication corridor on pole infrastructure for the VESI Network Operator			
	Tower work	Engaged in the installation and/or maintenance of Fibre Optic Cable and communication equipment on tower infrastructure for the VESI Network Operator, this may include radio towers			
Electrical inspector		Engaged in compliance inspections of customers LV and/or HV installations			
HV Switching	Distribution	Describes a person whose duties are to switch HV/LV Distribution apparatus up to and including 22kV external to a Zone Substation and/or Terminal Station. The class of Authority is defined by the Network Operator			
Operator	Terminal & Zone Substations	Describes a person whose duties are to switch Zone Substations and/or Terminal Station apparatus. The class of Authority is defined by the Network Operator			

Roles of Worker		Description of Work			
Lineworker	Distribution	Lineworker engaged in working on distribution and sub transmission assets			
	Transmission	Lineworker engaged in working on transmission assets			
Lineworker Distrik	oution HV Live Work	Lineworker – Distribution, undertaking HV live work Glove and Barrier and/or Stick method			
Meter Technician		An electrical worker engaged in the installation, maintenance or testing of direct, C/T and/or HV metering installations for the purpose of point of supply revenue metering			
No Go Zone Asses	ssor	A person who is approved by the Network Operator to grant permission for third party workers to work near overhead and Underground Network Assets			
Plant operator	Day hire	A person operating plant under direct supervision by a qualified worker for a specific task on a short-term basis e.g. crane			
Plant operator	ESI worker	A person whose duties are primarily operating ESI mobile plant on or near ESI infrastructure e.g. Pole Erection Recovery Unit (PERU), excavator			
Diagor	General	Engaged in general Rigging work other than on towers			
Rigger	Towers	Engaged in general Rigging work on tower infrastructure			
Substation	Distribution	Electricians, Electrical Fitter / Mechanics working on ESI distribution network infrastructure			
Electrician / Fitter	Terminal & Zone Substations	Electricians, Electrical Fitter / Mechanics working on ESI network infrastructure, in zone substations and or terminal stations			
Supervisor / Team	Leader	Team Leader / Supervisor not actively engaged in field work. Note: If the Team Leader / Supervisor is engaged in other work they must also have that role			
Supervisor / Team leader - Stations		Team Leader / Supervisor of workers in zone substations and or terminal stations. Note: If the Team Leader / Supervisor is engaged in other work they must also have that role			
Technical Officer / Maintenance worker		A person who requires access to an electrical environment including entry to HV/LV enclosures for the purposes of inspection, auditing, or grounds maintenance. Can include but not limited to Engineers, Draftsperson, Project managers/Planners, Surveyors, fire service technician, gardener, store person, driver, OHS Coordinator, trainer, manager etc.			
Terminal and Zone Substation Transformer Technician		A person undertaking installation, repair or removal of Transformers in a Terminal and Zone Substations			
	Distribution Assets	Includes field protection devices & cable testing			
Tester Terminal & Zone Substations		Includes testing associated with Transmission & Distribution equipment & / or protection and control circuits			

		A person with no electrical qualification undertaking			
Trade Assistant		support work with qualified ESI workers. Restricted to ground support function only. Note: Please refer to your Network operator regarding, if this role is applicable for the task being undertaken			
		Engaged in the VESI to assess hazardous trees. Arborists shall meet the qualification requirements as stated in the Electricity Safety (Electric Line Clearance) Regulations:			
		Suitably qualified arborist means an arborist who has:			
	Arborist	(a) as a minimum, the qualification of National Certificate III in Arboriculture including "Perform a ground-based tree defect evaluation" unit of competency, or an equivalent qualification; and			
		(b) at least 3 years of field experience in assessing trees			
	Assessor	Engaged in assessing and scoping vegetation near live electrical apparatus. Determine cutting requirements to confirm compliance for vegetation near live electrical apparatus			
Vegetation	Chipper Operator	Engaged in operating a woodchipper to process trees and branches that have been cut from around powerlines			
	Cutter working at ground level	Engaged in vegetation control work at ground level			
	Cutter working from EWP	Engaged in vegetation control work from an Elevated Work Platform (EWP)			
	Ground Based Plant Operator	Engaged in operating plant for the purpose of controlling vegetation from the ground with no risk of breaching SAD's, such as a tractor slasher or forest mower/mulcher			
	Herbicide worker	Engaged in vegetation control work by applying herbicide at ground level			
	Mechanical tree trimmer / Hedger	Engaged in vegetation control work from the ground using specialised plant e.g., Mechanical tree trimmer / Hedger			
	Tree Climber	Engaged in vegetation control work from a tree			

Appendix 2 – Training Modules / Competency Standard Units

Annual Assessments

Attached Climbing for Tower Work

Module purpose	This module provides the learner with the knowledge and skills to climb towers using the attached climbing method		
	This module can be used for both refresher training and initial training		
For whom	All workers required to climb towers		
Frequency	Annual		
Summary of content	 Visual inspection and attachment of equipment Correctly ascending a tower Correctly descends a tower 		
Learning outcomes	On successful completion of this module the learner should be able to:		
Learning Outcome 1	Demonstrate correct visual inspection of equipment		
Assessment Criteria	1.1 Perform visual inspection of harness, lanyards and associated fall prevention devices.		
	1.2 Perform check for correct operation of fall prevention devices.		
Learning Outcome 2	Demonstrate correct attached climbing techniques		
Assessment Criteria	2.1 Demonstrate tower ascent with one lanyard always attached to an acceptable anchor point*		
	2.2 Demonstrate correct attachment of pole strap or both lanyards when in final work position		
	2.3 Demonstrate the skill required to move to different work locations on the tower whilst attached at all times		
	2.4 Demonstrate correct descent of the tower with one restraining lanyard attached to an acceptable anchor point at all times		

Attached Climbing for Tower Work

Learning Outcome 3	Demonstrate correct use of installed fall arrest systems	
Assessment Criteria	3.1	Perform inspection of fixed fall arrest system
	3.2	Demonstrate the correct use of a fixed fall arrest system while ascending a tower
	3.3	Demonstrate the correct technique of transferring from a fixed fall arrest system to work position and back on to a fixed fall arrest system
	3.4	Demonstrate the correct use of a fixed fall arrest system to descend from a tower.
Learning Outcome 4	Demonstrate correct use of fall arrest rope	
Assessment Criteria	4.1	Perform inspection of fall arrest rope
	4.2	Demonstrate the correct use of a fall arrest rope while ascending a tower
	4.3	Demonstrate the correct technique of transferring from a fall arrest rope to work position and back on to a fixed fall arrest system
	4.4	Demonstrate the correct us of a fall arrest system to descend from a tower.

^{*} Should include knowledge of safe approach distances for instructed and authorised persons

High Voltage Live Work - Pole Erection Recovery Unit Operator

Module purpose

This module provides the learner with the knowledge and skills to safely assist a High Voltage (HV) Live Work crew in the installation, replacement, removal and maintenance of poles and associated electrical apparatus (e.g. HV switch replacement) up to 66kV

For whom

Pole Erection Recovery Unit (PERU) Operator who has the appropriate mobile plant licence and experience in the use of Pole Erection Recovery Units in the Electrical Supply Industry and who are not trained HV Live Lineworkers

Frequency

Yearly

Delivery

Shall be delivered by an RTO for initial, competency assessment and refresher training

Summary of content

- The Green Book
- Australian Standards for HV Live Working
- VESI Minimum Rules for Carrying out High Voltage Live Work in Victoria
- Relevant Enterprise HV Live Work manual, policy, and procedures
- Risk / Hazard assessment
- Role and responsibility of the "Safety Observer"
- General safety work practices
- Minimum Approach Distances (MAD)
- Step & Touch Potential
- Suitable Structures for pole replacement work
- Suitable Structures for electrical apparatus replacement work
- Mobile Plant Earthing and Bonding
- Setting up the Pole Erection Recovery Unit
- Jib Positioning & Lifting Operation
- Barriers and Cover up Equipment

Learning outcomes

On successful completion of the module the learner should be able to:

Learning outcome 1

Identify the relevant Australian Standards, VESI HV Live Work rules, safety instructions and general safe work practices and procedures for High Voltage Live Work techniques related to the installation, replacement, removal and maintenance of poles and associated electrical apparatus

Assessment criteria

1.1 Identify the clauses within The Green Book relating to HV Live Work

- 1.2 Identify the relevant information in the Australian Standards, VESI Minimum Rules for Carrying out High Voltage Live Work in Victoria and enterprise Live Work manuals and procedures
- 1.3 Define the Safe Work Method Statement (SWMS) and risk/job safety assessment process required prior to undertaking a HV Live Work task

Learning outcome 2

Plan and prepare to carry out, Live Work associated with the Installation, replacement, removal and maintenance of poles and associated electrical apparatus

Assessment criteria

- 2.1 Define the responsibilities of workers associated with the HV Live Work
- 2.2 Identify the common risks and controls appropriate to the task
- 2.3 State the responsibilities of the "Safety Observer" within the HV Live Work task
- 2.4 Identify suitable structures associated with the HV Live Work
- 2.5 Identify the minimum approach distances observed by workers plant and associated equipment when approaching exposed live HV conductors
- 2.6 Identify items of equipment used for HV live pole replacement work
- 2.7 Identify the general work practice and procedure including Barriers, cover up, plant earthing and bonding associated with HV live work
- 2.8 Identify the step and touch potential risks and controls

Learning outcome 3

Carry out the installation and/or replacement of a HV pole in conjunction with a HV Live Work crew under live or simulated live conditions

- 3.1 Identify and document the risks and controls appropriate to the task
- 3.2 Identify the equipment required to install and/or replace a live HV pole
- 3.3 Identify the method required to install and/or replace a live HV pole
- 3.4 Demonstrate the required set up of the PERU including earthing requirements and jib positioning
- 3.5 Perform appropriate work methods to replace/install a HV pole and associated hardware with conductors energised using correct HV Live Work methods
- 3.6 Demonstrate the required minimum approach distances and safety procedures

High Voltage Live Work - Vehicle Loading Crane Operator

Module purpose

This module provides the learner with the knowledge and skills to safely assist a High Voltage (HV) Live Work crew in the Installation, replacement, removal and maintenance of electrical apparatus tasks (e.g. HV switches) in the vicinity of Live HV apparatus up to 66kV

For whom

Vehicle loading crane operator who has the appropriate licence and experience in the use of Vehicle loading Cranes in the Electrical Supply Industry and who are not trained HV Live Lineworkers

Frequency

Yearly

Delivery

Shall be delivered by an RTO for initial, competency assessment and refresher training

Summary of content

- The Green Book
- Australian Standards for HV Live Working
- VESI Minimum Rules for Carrying out High Voltage Live Work in Victoria
- Relevant Enterprise HV Live Work manual, policy, and procedures
- Risk / Hazard assessment
- Role and responsibility of the "Safety Observer"
- General safety work practices
- Minimum Approach Distances (MAD)
- Step & Touch Potential
- Suitable Structures for electrical apparatus replacement work
- Mobile Plant Earthing and Bonding
- Setting up the vehicle loading crane
- Jib Positioning & Lifting Operation
- Barriers and Cover up Equipment

Learning outcomes

On successful completion of the module the learner should be able to:

Learning outcome 1

Identify the relevant Australian Standards, VESI HV Live Work rules, safety instructions and general safe work practices and procedures for High Voltage Live Work techniques related to the Installation, replacement, removal, and maintenance of electrical apparatus

- 1.1 Identify the clauses within The Green Book relating to HV Live Work
- 1.2 Identify the relevant information in the Australian Standards, VESI Minimum Rules for Carrying out High Voltage Live Work in Victoria and enterprise Live Work manuals and procedures

1.3 Define the Safe Work Method Statement and risk/job safety assessment process required prior to undertaking a HV Live Work task

Learning outcome 2

Plan and prepare to carry out the installation, replacement, removal and maintenance of electrical apparatus in the vicinity of Live HV apparatus

Assessment criteria

- Define the responsibilities of workers associated with 2.1 the Installation, replacement, and removal of electrical apparatus
- 2.2 Identify the common risks and controls appropriate to the task
- 2.3 State the responsibilities of the Safety Observer
- 2.4 Identify suitable structures for the installation. replacement, and removal of electrical apparatus
- 2.5 Identify the minimum approach distances observed by workers plant and associated equipment when approaching exposed live HV conductors
- 2.6 Identify items of equipment used for the Installation, replacement, and removal of electrical apparatus
- 2.7 Identify the general work practice and procedure including barriers, cover up, plant earthing and bonding associated with HV Live work
- 2.8 Identify the step and touch potential risks and controls

Learning outcome 3

Carry out the Installation, replacement, and removal of electrical apparatus in conjunction with a HV Live Work crew under live or simulated live conditions

- 3.1 Identify and document the risks and controls appropriate to the task
- 3.2 Identify the equipment required to install, replace, and remove electrical apparatus
- 3.3 Identify the method required to install, replace, and remove electrical apparatus
- 3.4 Demonstrate the required set up of the vehicle loading crane including earthing requirements and jib positioning
- 3.5 Perform appropriate work methods to install, replace and remove electrical apparatus with conductors energised using correct Live Work methods
- 3.6 Demonstrate the required minimum approach distances and safety procedures

Limited High Voltage Live Work (Vegetation Control)

Module purpose

This module provides the learner with the knowledge and skills to safely perform High Voltage (HV) limited stick tasks up to and including 22KV for the purpose of vegetation control

The course involves the limited use of HV live work equipment such as hand sticks, fitting of conductor covers and insulated control ropes to facilitate the moving of HV conductors away from vegetation but does not allow actual work to be performed on conductors or the un-securing of conductors from a structure

For whom

Qualified Line workers who are required to undertake vegetation work near Live HV overhead conductors and who are not already trained in HV Live work. This module is subject to prior Network Operator approval

Frequency

Yearly

Delivery

Shall be delivered by an RTO for initial, competency assessment and refresher training. Refer to the VESI Minimum Rules for Carrying out HV Live Work for anticipated minimum time frames for annual competency assessments

Summary of content

- The Green Book
- HV Live Working Australian Standards
- VESI Minimum Rules for Carrying out High Voltage Live Work in Victoria
- Relevant Enterprise HV Live Work manual, policy, and procedure
- Risk / Hazard assessment
- Role and responsibility of the "Safety Observer"
- General safety work practices
- Minimum Approach Distances
- HV Live work tools and equipment

Learning outcomes

On successful completion of the module the learner should be able to:

Learning outcome 1

Identify the relevant Australian Standards, VESI HV Live Work rules and general safe work practices and procedures to undertake HV Live work techniques

- Identify the clauses within The Green Book relating to Live line work
- 1.2 Identify the relevant HV Live Working Australian Standards

- 1.3 Identify the relevant information in the VESI Minimum Rules for Carrying out High Voltage Live Work in Victoria and enterprise HV live Work manuals and procedures
- Define the Safe work Method statement and risk/job safety assessment process required prior to undertaking a HV Live work task
- 1.5 Identify the communication and application requirements with the control room to perform HV live work according to established enterprise procedures
- Define the process for incident reporting according to 1.6 established enterprise procedures

Learning outcome 2

Plan and prepare to carry out High Voltage Live Work for Vegetation Control

- Define the responsibilities of workers associated with 2.1 the HV Live Work Vegetation control
- 2.2 Identify the minimum approach distances observed by workers, plant and Live Line tools when approaching exposed live high voltage conductors
- 2.3 Identify the equipment required to perform limited HV live work including the clearing of vegetation in proximity to live HV conductors
- 2.4 Identify the methods required to perform the vegetation clearing tasks
- 2.5 Define the care, maintenance and testing requirements for Live Line equipment to be utilised
- 2.6 Identify the general work practice and procedure for plant earthing and bonding associated with HV live work
- 2.7 Identify the step and touch potential risks and controls

Learning outcome 3

Identify the requirements and responsibilities of a Safety Observer in relation to HV Live work

Assessment criteria

- 3.1 Identify the roles and responsibilities of a safety observer/s during a HV Live work task
- Identify environmental influences that may contribute to 3.2 distraction of a safety observer
- 3.3 Identify the ergonomic requirements in relation to the positioning of the safety observer to be and remain effective
- 3.4 Identify methods of communication between the safety observer and the HV Live work crew

Learning outcome 4

Carry out High Voltage Live Work for Vegetation Control tasks

- 4.1 Identify the equipment required to perform limited HV live work including the clearing of vegetation in proximity to live HV conductors
- 4.2 Identify the methods required to perform the vegetation clearing tasks
- 4.3 Identify and document the risks and controls appropriate to the task
- 4.4 Demonstrate the communication requirements to perform HV live work with the Control Centre
- 4.5 Demonstrate the required skills and knowledge to perform vegetation clearing tasks in a variety of situations in line with the VESI "Minimum Rules for carrying out High Voltage Live Work in Victoria" document including the:
 - Fitting of HV covers to conductors
 - ~ Fitting of insulated control ropes to move/restrain conductors to provide clearance to vegetation
 - Use of insulated hand sticks to control conductors or vegetation
- Perform and demonstrate competence in vegetation clearing tasks in various situations where the vegetation to be removed is:
 - below the conductors,
 - adjacent to the conductors
 - above the conductors
- Demonstrate the required minimum approach distances and safety precautions

Maintain energised high voltage distribution overhead electrical apparatus (glove and barrier) – UETDRDO003

This Competency Standard Unit is published at www.training.gov.au

Frequency Annual

Delivery This Competency Standard Unit shall be delivered by an RTO

for initial, competency assessment and refresher training.

Refer to the VESI Minimum Rules for Carrying out HV Live Work for anticipated minimum time frames for annual

competency assessments

Maintain energised high voltage distribution overhead electrical apparatus (stick) – UETDRDO004

This Competency Standard Unit is published at www.training.gov.au

Frequency Annual

Delivery This Competency Standard Unit shall be delivered by an RTO

for initial, competency assessment and refresher training.

Refer to the VESI Minimum Rules for Carrying out HV Live

Work for anticipated minimum time frames for annual

competency assessments

Maintain energised transmission lines using high voltage live work bare hand techniques - UETDRTO011

This Competency Standard Unit is published at www.training.gov.au

Frequency Annual

Delivery This Competency Standard Unit shall be delivered by an RTO

for initial, competency assessment and refresher training.

Refer to the VESI Minimum Rules for Carrying out HV Live Work for anticipated minimum time frames for annual

competency assessments

Maintain energised transmission lines using live work stick techniques - UETDRTO012

This Competency Standard Unit is published at www.training.gov.au

Frequency Annual

This Competency Standard Unit shall be delivered by an RTO **Delivery**

for initial, competency assessment and refresher training.

Refer to the VESI Minimum Rules for Carrying out HV Live Work for anticipated minimum time frames for annual

competency assessments

Perform cable pit / trench / excavation rescue - UETDRMP003

This Competency Standard Unit is published at www.training.gov.au

Frequency Annual

Delivery This Competency Standard Unit shall be delivered by an RTO

Perform elevated work platform controlled descent escape - UETDRMP004

This Competency Standard Unit is published at www.training.gov.au

Frequency Annual

Delivery This Competency Standard Unit shall be delivered by an RTO

for initial, competency assessment and refresher training.

Perform elevated work platform rescue – UETDRMP005

This Competency Standard Unit is published at www.training.gov.au

Frequency Annual

Delivery This Competency Standard Unit shall be delivered by an RTO

for initial, competency assessment and refresher training.

Perform pole top rescue - UETDRMP006

This Competency Standard Unit is published at www.training.gov.au

Frequency Annual

Delivery This Competency Standard Unit shall be delivered by an RTO

Perform rescue from a live low voltage panel - UETDRMP007

This Competency Standard Unit is published at www.training.gov.au

Frequency Annual

Delivery This Competency Standard Unit shall be delivered by an RTO

for initial, competency assessment and refresher training.

Perform rescue from switchyard structures - UETDRMP008

This Competency Standard Unit is published at www.training.gov.au

Frequency Annual

Delivery This Competency Standard Unit shall be delivered by an RTO

for initial, competency assessment and refresher training.

Perform rescue from within a tree in the vicinity of live electrical apparatus - UETDRVC010

This Competency Standard Unit is published at www.training.gov.au

Frequency Annual

Delivery This Competency Standard Unit shall be delivered by an RTO

Perform tower rescue - UETDRMP009

This Competency Standard Unit is published at www.training.gov.au

Frequency Annual

Delivery This Competency Standard Unit shall be delivered by an RTO

for initial, competency assessment and refresher training.

Provide cardiopulmonary resuscitation – HLTAID009

This Competency Standard Unit is published at www.training.gov.au

Frequency Annual

Delivery This Competency Standard Unit shall be delivered by an RTO

for initial and refresher training.

Provide first aid in an ESI environment - UETDRMP010

This Competency Standard Unit is published at www.training.gov.au

Frequency Annual

Delivery This Competency Standard Unit shall be delivered by an RTO

Safe Approach Distances

Module purpose

This module provides the learner with the knowledge and skills to maintain safe approach distances (SAD) to high voltage (HV) and low voltage (LV) electrical apparatus

This module can be used for both initial and refresher training

For whom

All workers when working, or operating Vehicles or Mobile Plant, on or near Electrical Apparatus

Frequency

Annual

Summary of content

- The Blue Book and The Green Book
- SAD to HV and LV apparatus in regards to:
 - ~ Personal clearances
 - ~ Vehicles
 - Mobile plant
 - Elevating Work Platforms (EWP)
- SAD Special

Learning outcomes

On successful completion of this module the learner should be able to:

Learning outcome 1

Identify the requirements for the Safe Approach to Electrical Apparatus within the Victorian Electrical Supply Industry

Assessment criteria

- Identify and explain clauses within The Blue Book 1.1 and/or The Green Book relating to the Safe Approach to **Electrical Apparatus**
- 1.2 Identify and explain clauses within The Blue Book and/or The Green Book relating to the application of Safe Approach Distance - Persons

Learning outcome 2

Identify the SAD for persons working on or near HV and LV electrical apparatus and the safe use of vehicles or mobile plant

- 2.1 Identify the SAD to HV and LV apparatus for persons
- 2.2 Identify the SAD to HV and LV apparatus for vehicles
- 2.3 Identify the SAD to HV and LV apparatus for mobile plant
- 2.4 Identify the SAD to HV and LV apparatus for EWP vehicles

Safe Approach Distances

Learning outcome 3*	Identify the requirements for SAD special		
Assessment criteria	3.1	Identify the requirements for the use of SAD Special	
	3.2	Identify the SAD special to high voltage apparatus and who can apply SAD special	
	3.3	Identify the control measures used when applying SAD special	
	3.4	Identify the approved tasks authorised persons can apply SAD special	

^{*}Learning outcome 3 is only required for workers undertaking Distribution overhead work

Module purpose

This module provides the learner with the knowledge and skills to maintain Safe Approach Distances (SAD) and Vegetation clearances to High Voltage (HV) and Low Voltage (LV) electrical apparatus

This module can be used for both initial and refresher training

For whom

All workers when working, or operating Vehicles or Mobile Plant, near or in the vicinity of Electrical Apparatus

Frequency

Annual

Summary of content

- The Blue Book and The Green Book
- **VESI Vegetation Management Guideline**
- SAD to HV and LV apparatus in regards to:
 - Personal clearances
 - ~ Vehicles
 - Mobile plant
 - Elevating Work Platforms (EWP)
- Vegetation Clearances

Learning outcomes

On successful completion of this module the learner should be able to:

Learning outcome 1

Identify the requirements for the Safe Approach to Electrical Apparatus and Vegetation Clearances within the Victorian **Electrical Supply Industry**

- Identify and explain clauses within The Green Book relating to the Safe Approach to Electrical Apparatus
- Identify and explain clauses within The Green Book relating to the application of Safe Approach Distance -Persons applicable to vegetation works
- Identify and explain clauses within The Green Book and the VESI Vegetation Management Guideline relating to the application of Safe Approach Distance and Vegetation Clearances for Vegetation Works

Learning outcome 2

Identify the SAD for Instructed and Authorised persons working near or in the vicinity of HV and LV electrical apparatus and the safe use of vehicles or mobile plant

Assessment criteria

- 2.1 Identify the SAD to HV and LV apparatus for persons undertaking Vegetation works utilising insulated EWP, tools, plant and equipment
- 2.2 Identify the SAD to HV and LV apparatus for persons undertaking Vegetation works when climbing or working from ground level
- 2.3 Identify the SAD to HV and LV apparatus for vehicles
- 2.4 Identify the SAD to HV and LV apparatus for mobile plant
- 2.5 Identify the SAD to HV and LV apparatus for EWP vehicles

Learning outcome 3

Identify the Vegetation Clearances for Instructed and Authorised persons working near or in the vicinity of HV and LV electrical apparatus

- 3.1 Identify the Vegetation Clearances for persons utilising insulated EWP, tools plant and equipment
- 3.2 Identify the Vegetation Clearances for persons performing vegetation works when climbing or working from ground level

Testing of connections to low voltage electricity networks - UETDRMP011

This Competency Standard Unit is published at www.training.gov.au

When delivering the CSU the following VESI requirements including the learning outcomes and assessment criteria shall be undertaken.

Delivery

This Competency Standard Unit shall be delivered by an RTO for initial, competency assessment and refresher training.

Frequency

Annual

Assessment Requirements

When delivering the VESI training/assessment requirements the Mandatory (M) practical assessment tasks from the VESI Installation Supply and Connection Testing Procedures in table 1 shall be completed for the nominated role.

Where the individual Connection Procedure is Inclusive (I) for a particular role, the testing steps and principals are replicated in the Mandatory practical assessment task and are not required to be independently assessed. However, the participant should be aware of these procedures and any specific requirements stipulated e.g. lifting neutrals

Additional (A) Connection Procedures that are undertaken by the participant during their work activities are required to be assessed as competent during the annual refresher.

Assessments shall be completed individually to confirm the worker's competency. Practical assessments should be completed one on one with the assessor and not in a group setting, to confirm competency to the required test procedures.

Testing of connections to low voltage electricity networks – UETDRMP011

Table 1

Continu	Composition Procedures	Line	Cable	Electrical	Metering
Section	Connection Procedures New Installations	worker	Jointer	Inspector	Technician
4.4	Overhead Supply - Up to 100 Amp	ı			
4.5	Underground Supply - Supplied from a Pit	M ¹			
4.6	Supply Connections greater than 100 Amps – Overhead or Underground (or Customer initiated)	A	А	М	
4.7	Unmetered Supply - Not associated with Multiple Occupancies	I		I	
4.8	Multiple Occupancy – Direct metered Occupancies	А		I	
4.9	Public Lighting - With Switchboard		М		
4.9.1	Public Lighting - Without Switchboard (Frangible Column)	I	I		
4.10	Public Light – with customer/s supply		Informativ	e section only	
	Existing Installations				
4.11	Replacement or Disconnection & Reconnection Overhead Service - Service Cable "On Supply"	М			
4.11.1	Replacement or Disconnection & Reconnection Underground Consumer's Mains up to 100A, Single Occupancy Supplied from a Pit - Service Cable "On or off Supply"	M¹	М	ı	
4.11.2	Replacement or Disconnection & Reconnection Underground Consumer's Mains up to 100A, Multiple Occupancy supplied from a Pit - Service Cable 'On or off Supply"	l ²	l 2	ı	
4.11.3	Replacement or Disconnection & Reconnection Underground Service greater than 100A, Single or Multiple Occupancy	l ²	l ²		
4.12	Overhead Service Cable – Service Cable "Disconnected"	I			
4.13	Overhead Service Replacement – Service; Protection Device Pole End	I		I	
4.14	Single Occupancy: Meter Alteration and/or Additions - Direct Metering	M			М
4.14.1	Multiple Occupancy (MO) Alteration and/or Additions - Direct Metering Main or Occupancy Neutral 'Not Disturbed"	I		I	I
4.14.2	Multiple Occupancy (MO) Meter Alteration and/or Additions - Direct Metering Main or Occupancy Neutral "Disturbed"	I		I	I
4.15	Alteration and/or Additions – CT Metering				М
4.16	Abolishment of Electricity Supply	I			
4.17	Network "High Voltage" Injections			M	
4.18	UG Mains Cable Fault - Restoration of Supply	I	I	I	

Legend

¹ Dependant on the type of testing work being undertaken in the workplace, the worker can either undertake test procedure 4.5 Underground Supply - *Supplied from a Pit or* 4.11.1 Replacement or Disconnection & Reconnection Underground Consumers Mains up to 100A, Single Occupancy supplied from a pit Service Cable 'On or off Supply"

² Multiple Occupancy training for 4.11.2 and 4.11.3 shall only be undertaken after the initial training for Multiple Occupancy (4.8) testing procedure is completed.

Module purpose This module provides the learner with the knowledge and

skills to carry out servicing and connection testing procedures

for new or existing customer installation

For whom All workers required to carry out servicing and connection

testing procedures

Frequency Annual

Summary of content • Servicing Safety Processes

- ~ Personal protective equipment
- ~ Risk Assessment
- ~ Hazards
- Disconnecting or reconnecting a consumer's mains or submains neutral
- Servicing Testing Processes
 - ~ Testing for De-energised
 - Establishing the Neutral Integrity Test Point
 - ~ Continuity Test
 - Identifying and marking neutrals
 - ~ Identifying conductors when ID unknown
 - ~ Polarity Testing
 - ~ VESI Neutral and Supply Tester (NST) Procedure
 - ~ How the NST works
 - Installation Supply Connection Tests and Procedures
 - ~ Neutral Impedance Test Failure
 - ~ Check Test
 - ~ Phase Sequence Testing
 - ~ Load Testing
- Service height requirements according to asset regulations and company policy
- LV Customer Installations Safety Regulations and Procedures
 - ~ Customer notifications and standard forms
 - ~ Certificate of Electrical Safety
 - Notice of Installation Defect
 - Statement of Isolation of Customers Low Voltage Supply (SILV)

Learning outcomes

On successful completion of this module the learner should be able to:

Learning outcome 1

Demonstrate Servicing Safety Processes

Assessment criteria

- Identify and correctly use personal protective equipment (PPE) and safety equipment when performing installation servicing work
- 1.2 Carry out a risk assessment to identify the hazards pertaining to an installation servicing task
- 1.3 Identify the hazards associated with working in pits
- 1.4 Demonstrate the ability to identify and mark neutrals
- Demonstrate the ability to identify conductors when ID 1.5 unknown

Learning outcome 2

Identify the requirements for an electrical installation worker disconnecting or reconnecting a consumer's main neutral

Assessment criteria

- Define the requirements of Order in Council G51 in relation to an Electrical Installation worker
- 2.2 Identify the safety aspects of the disconnection and reconnection of consumer's mains neutral and neutral and polarity testing
- Identify any limitations associated with this work 2.3 including complex metering such as CT metering
- Demonstrate the safe disconnecting and reconnecting 2.4 of consumer's mains neutrals
- 2.5 Demonstrate the safe disconnecting and reconnecting of consumer's submains neutrals

Learning outcome 3

Demonstrate the ability to apply testing associated with connection procedures.

Note: These tests are to be performed relevant to the role as detailed in Table 1 above.

- Perform Installation Supply Connection tests to 3.1 installation
 - Demonstrate Test for De-energised
 - Demonstrate Establishing a Neutral Integrity Test Point
 - Demonstrate Polarity Testing
 - Demonstrate Check Testing
 - Demonstrate Phase Sequence Testing
 - Demonstrate Underground consumer's main test (Insulation and continuity resistance)
 - Demonstrate Load Testing

Learning outcome 4

Demonstrate the NST Procedure

Note: These tests are to be performed relevant to the role as detailed in Table 1 above.

Assessment criteria

- 4.1 Demonstrate a knowledge of the VESI "Installation Supply Connection Tests and Procedures"
- 4.2 Describe the purpose of the NST tester
- 4.3 Identify the Neutral Integrity Test Point
- 4.4 Perform an NST on a service installation
- 4.5 Identify a fault using the NST tester
- 4.6 Describe the faults and variants that could lead to an incorrect result on a test
- 4.7 Demonstrate the procedure for disconnection and reconnection of a service cable
- 4.8 Describe the correct reporting procedure when an installation fails the Neutral Supply Test

Learning outcome 5

Demonstrate an understanding of appropriate forms and documents relating to LV installations

Assessment criteria

- 5.1 Demonstrate an understanding of the correct process regarding the Certificate of Electrical Safety (Prescribed and Non-prescribed)
- 5.2 Demonstrate an understanding and the correct use of a Notice of Installation Defect
- 5.3 Demonstrate an understanding of a Statement of Isolation Low Voltage (SILV)

Learning outcome 6*

Describe service heights required by the Network Operator.

- 6.1 Describe service heights required by the Network Operator
- *Learning outcome 6 is only required for workers undertaking Distribution overhead work

Three Yearly assessments

Apply access authority procedures to work on or near electrical apparatus - UETDRMP001

This Competency Standard Unit is published at www.training.gov.au.

When delivering the CSU, the following VESI requirements including the learning outcomes and assessment criteria shall be undertaken.

This Competency Standard Unit shall be delivered by an RTO **Delivery**

for initial, competency assessment and refresher training.

Three yearly Frequency

Identify the requirements for the use of the EAP within the Learning outcome 1

Victorian Electrical Supply Industry

Assessment criteria Identify and explain clauses within The Blue Book or 1.1 The Green Book relating to the access of HV and LV

electrical apparatus

1.2 Identify and explain clauses within The Blue Book or The Green Book relating to the general Safety

requirements

1.3 Identify and explain clauses within The Blue Book or The Green Book relating to the work in the vicinity of electrical apparatus

Identify and explain the clauses within The Blue Book or 1.4 The Green Book relating to the approach to electrical

apparatus

Identify and explain clauses within The Blue Book or The Green Book relating to the earthing of High Voltage electrical apparatus

Identify and explain clauses within The Blue Book or The Green Book relating to Access to work on or Near High Voltage Electrical Apparatus

Identify and explain clauses within The Blue Book or The Green Book relating to the coordination of Low Voltage and High Voltage Access Switching

1.8 Identify and explain the requirement and reasons for and use of the Electrical Access Permit

1.9 Identify and explain the reasons for the Electrical

Access Authorisation process

Learning outcome 2

Identify the requirements of the Electrical Access Permit and its application

Assessment criteria

- Identify the general nature of all types of electrical apparatus within the scope of the Electrical Access Permit
- 2.2 Describe the circumstances under which electrical apparatus may be approached and describe the precautions to be taken
- 2.3 Describe the various methods of isolating HV and LV apparatus in general use and associated processes for locking and tagging
- 2.4 Describe the significance of the various types of signs and barriers in use
- 2.5 Describe the purpose and application of operational and work party earths in general use
- 2.6 Describe the methods that apparatus can inadvertently become or remain alive
- 2.7 Describe the EAP issuing and cancellation process
- 2.8 Describe the process to change the Electrical Access permit conditions (e.g. signing on an additional recipient)
- Explain the importance of keeping the EAP available for reference at the worksite and of signing off the Permit before leaving the worksite
- 2.10 Describe the communication process for an emergency on site

Learning outcome 3

Describe the purpose and application of the various VESI forms and their relationship to an Electrical Access Permit

- 3.1 Describe the EAP form and identify the sections and their information requirements
- 3.2 Describe application of a LV Access Authority
- 3.3 Describe application of an Electrical Apparatus Clearance for Service
- 3.4 Describe the application of a Vicinity Authority
- 3.5 Describe the application of a Permit to Work / SILV
- 3.6 Describe the application of a Sanction for Tests

Apply Access procedures to work on or near electrical network infrastructure -**UETTDRRF09**

Learning outcome 4	Identify the responsibilities of the various workers associated
	with the Access Permit process

Assessment criteria

- 4.1 Describe the responsibilities of the Operator issuing an **Electrical Access Permit**
- 4.2 Describe the responsibilities of the Recipient in Charge of an Electrical Access Permit
- 4.3 Describe the responsibilities of the Authorised Recipient of an Electrical Access Permit
- Describe the circumstances under which Instructed Persons may sign onto an Electrical Access Permit and the process for ensuring their safety
- The Responsibilities of the Safety Observer in relation 4.5 to the Access Permit requirements

Learning outcome 5

Demonstrate an understanding of the earthing process

Assessment criteria

- State the related safe working practices and the procedures to attach an earthing device
- 5.2 Identify when and where additional earths and/or bonders are required
- 5.3 Describe the Priority Earthing System
- 5.4 Demonstrate the correct application of an earthing device to an isolated HV circuit. (Note: Learning Assessment Criteria 5.4 applies to persons with a need to apply earths)

Learning outcome 6

Describe the Network Operator's procedures relating to entry to enclosure requirements, site security, communications protocols for entry and exit and in an emergency situation

- Describe the Network Operator's procedures relating to 6.1 site security, emergency contacts and operational contacts
- Identify safe work practices, general precautions and 6.2 hazards that need to be observed when entering a HV enclosure

Confined Spaces

Training shall be based on the work being undertaken and the performance criteria outlined in the relevant Competency Standard Unit, which meets the requirements of the Occupational health and Safety Regulations 2017 - Part 3.4 Confined Spaces.

Consideration shall be given to the following requirements: entry to a confined space, the use of a work permit system, breathing apparatus and confined space rescue when selecting the relevant Competency Standard unit

Frequency Three yearly

Delivery Shall be delivered by an RTO for initial, competency

assessment and refresher training

Control traffic with stop-slow bat - RIIWHS205E

This Competency Standard Unit is published at www.training.gov.au

Frequency Three yearly

Delivery This Competency Standard Unit shall be delivered by an RTO

for initial, competency assessment and refresher training

Implement traffic management plan - RIIWHS302E

This Competency Standard Unit is published at www.training.gov.au

Frequency Three yearly

Delivery This Competency Standard Unit shall be delivered by an RTO

for initial, competency assessment and refresher training

Module purpose

This module provides the learner with the knowledge and skills to understand the procedures to be observed when entering enclosures containing High Voltage (HV) and Low Voltage (LV) apparatus

This module can be used for both initial and refresher training

For whom

All workers not otherwise authorised who are required to enter enclosures containing HV/LV apparatus

Frequency

Three yearly

Summary of content

- Overview of the Electrical Distribution and Transmission System
- Identification of HV & LV Apparatus
- The Blue Book and The Green Book
- Safe Approach Distances to HV and LV apparatus in regards to:
 - ~ Personal clearances
 - ~ Vehicles
 - Mobile plant
 - Elevating Work Platforms (EWP)
- Procedures to be observed when entering LV and HV enclosures
- Evacuation and emergencies
- **Underground Substation Procedure**
- Personal protective equipment (PPE)
- Site visit may include distribution or zone sub-stations or terminal stations

Learning outcomes

On successful completion of this module the learner should be able to:

Learning outcome 1

Identify the requirements of the electrical distribution and transmission system and features of simple electrical circuitry.

- Describe the key features of electricity i.e. voltage, current
- 1.2 Describe the effect that electricity has on the human body
- 1.3 Identify the main features of an electrical supply system, from power station to the customer

Learning outcome 2

Identify the requirements for entry into enclosures within the Victorian Electrical Supply Industry

Assessment criteria

- 2.1 Identify and explain clauses within The Blue Book or The Green Book relating to the general safety requirements
- 2.2 Identify and explain clauses within The Blue Book or The Green Book relating to the work in the vicinity of electrical apparatus
- 2.3 Identify and explain clauses within The Blue Book or The Green Book relating to the safe approach to electrical apparatus
- 2.4 Identify LV and HV apparatus within an enclosure

Learning outcome 3

Identify the safe approach distances (SAD) for persons entering enclosures containing LV and HV apparatus

Assessment criteria

- 3.1 Identify SAD to LV and HV electrical apparatus for workers authorised to enter enclosures
- 3.2 Identify SAD to LV and HV apparatus for vehicles and mobile plant
- 3.3 Identify the requirements and SAD's to LV and HV apparatus for plant and persons working under instruction (safety observer) of an authorised Electrical trade qualified worker

Learning outcome 4

Identify safe work practices, general precautions and hazards that need to be observed whilst within an LV and HV environment

- 4.1 Identify and locate the correct enclosure
- 4.2 Identify and correctly use personal protective equipment (PPE) and safety equipment for workers entering LV and HV enclosures.
- 4.3 Demonstrate knowledge of potential hazards that may exist in enclosures containing LV and HV apparatus.
- 4.4 Identify HV enclosures within a station that require more than just an Authorisation to enter.
- 4.5 Describe the Network Operator's procedures relating to site security, communication protocols for entry and exit during normal work activities and in an emergency.

Module purpose

This module provides the learner with the knowledge and skills to perform High Voltage Electrical Switching on all distribution overhead and ground type substations, spur and SWER lines and associated apparatus, excluding metal enclosed switch gear

For whom

All workers required to perform switching on the high voltage Distribution overhead apparatus, excluding the interconnected Network

Prerequisite

UETDRIS017 - Perform high voltage field switching operation to a given schedule. UETDRIS018 - Perform low voltage field switching operation to a given schedule. These Competency Standard Units shall be delivered by an RTO

Summary of content

- The Green Book
- Roles and responsibilities
- Network Operational procedures
- Safe Work Method Statements (SWMS) and site risk assessment process
- Operation of HV and LV electrical apparatus
- Interpretation of HV single line diagrams
- Systematic approach to switching
- Hazard identification and Operator protection
- Use of personal protective equipment (PPE) and safety equipment
- Use of Operating Instructions
- Communications protocols
- Earthing Procedures
- Issue / cancellation of Electrical Access Authority/s for workers working on or in the vicinity of HV apparatus
- Ferro Resonance
- Restoration of supply
- Fault finding and emergency response
- Understanding of Protection Schemes

Assessment The practical assessment should remain flexible to allow

where possible, the utilisation of scheduled work for

assessment

Frequency Three yearly

Learning outcomes On successful completion of this module the learner should

be able to:

Learning Outcome 1 Locate, interpret, and apply appropriate Regulations, The

Green Book and Network Operator Switching procedures

relating to HV electrical safety

Assessment Criteria

1.1 Describe the structure of industry standards in relation to electrical safety

1.2 Reference the Green Book for clauses related to safe work procedures while performing switching operations.

1.3 Reference Network Operator Switching Procedures

1.4 Describe the function, roles and responsibilities of a Distribution Switching Overhead Operator

1.5 Identify Safe Work Method Statements (SWMS) and site risk assessment process for HV Switching

1.6 Identify and correctly use personal protective equipment (PPE) and safety equipment required for the safe operation of high voltage switchgear

- 1.7 Identify communications process with the Control Centre, work parties and other operators
- 1.8 Identify communications process for incident reporting in regards to switching operations

Version 11 July 2024

UNCONTROLLED WHEN PRINTED

Learning Outcome 2

Identify the function, operation, and precautions associated with high voltage electrical apparatus and associated hardware

Assessment Criteria

- 2.1 Identify the capabilities of the typical range of switchgear installed on the overhead distribution network
- 2.2 Identify the use of caution and danger tags
- 2.3 Identify the precautions necessary in relation to Ferro resonance
- 2.4 Describe the method of operation of typical high voltage switchgear installed on the distribution network
- 2.5 Describe a pre-operation inspection and the associated hazards relative to the switchgear being operated
- 2.6 Describe the Network Operator nomenclature standards and switch numbering
- 2.7 Identify the procedure for commissioning new apparatus including new transformers, pre-commissioning tests, insulation tests, no-load voltage tests, phase sequence tests and phase-out tests
- 2.8 Describe the operation and precautions associated with SWER systems

Learning Outcome 3

Interpret HV single line diagrams

- 3.1 Identify the meaning of various symbols used in single line diagrams
- 3.2 Read a single line diagram, check that it is correct with the network system

Learning Outcome 4

Demonstrate switching processes, procedures and communication protocol for the safe switching of the distribution overhead network

Assessment Criteria

- 4.1 Demonstrate accurate and effective communications with the Control Centre
- 4.2 Demonstrate the use of a switching instruction while performing switching operations
- 4.3 Demonstrate a pre-operation inspection and describe the hazards that are relative to the switchgear being operated
- 4.4 Demonstrate the application of a systematic approach to switching
- 4.4 Demonstrate the operation of a range of high voltage switchgear installed on the distribution network

Learning Outcome 5

Demonstrate effective earthing practices and procedures when earthing HV electrical apparatus for access

- 5.1 Identify the requirements for isolation from primary and secondary voltages necessary for safe access under access authority conditions
- 5.2 Identify the dangers of the application of earth devices to high voltage apparatus
- 5.3 Identify and correctly use personal protective equipment (PPE) and safety equipment required for the safe application of high voltage earthing devices
- 5.4 Demonstrate the application of a systematic approach to earthing
- 5.5 Describe the priority earthing system

Learning Outcome 6

Describe the purpose, preparation and procedure for use of operational forms, access authorities and permits associated with HV switching

Assessment Criteria

- 6.1 Identify the options available for managing work in the vicinity of high voltage apparatus
- 6.2 Describe the need for maintaining security of high voltage installations, and for controlling the activity of people in these areas
- 6.3 Describe the access permit procedure, the responsibilities of people involved and its application in the workplace
- 6.4 Identify the requirements of additional access authorities associated with access to high voltage apparatus e.g. SILV, SCAP, PTW

Learning Outcome 7

Issue and cancel access authorities appropriate to the nominated tasks

- Identify the procedures for the completion, issue and 7.1 cancellation of an Electrical Access Authority
- 7.2 Prepare an Electrical Access Authority in accordance with accepted procedures and practices, which clearly defines safety precautions relating to access to high voltage apparatus
- 7.3 Conduct preliminary discussions with work party ensuring that the task can commence safely and issue an Electrical Access Authority for a specified task
- 7.4 Confirm the work is completed, the apparatus is fit for service and cancel Electrical Access Authority in accordance with procedures

Learning Outcome 8	Describe the functions and operation of common high voltage protection systems and suppression functionality
Assessment Criteria	8.1 Describe the functions and operation of over current and earth leakage protection8.2 Identify suppression requirements when undertaking network switching
Learning Outcome 9	Identify the requirements for patrolling and switching the HV network in fault situations
Assessment Criteria	9.1 Describe how to effectively patrol a faulted section of line to identify the probable cause
	9.2 Explain how to efficiently isolate the faulted apparatus and restore supply under direction of the Control Centre
	9.3 Describe the actions needed to liaise with other emergency services to make a faulted area safe
	9.4 Demonstrate the actions necessary to coordinate on site repairs with work parties

Module purpose

This module provides the learner with the knowledge and skills to perform High Voltage Electrical Switching on; all distribution overhead field apparatus, excluding metal enclosed switchgear

Prerequisite

UETDRIS017 - Perform high voltage field switching operation to a given schedule. UETDRIS018 - Perform low voltage field switching operation to a given schedule. These Competency Standard Units shall be delivered by an RTO

For whom

All workers required to perform switching on the high voltage Distribution Overhead Network

Summary of content

- The Green Book
- Roles and responsibilities
- Network Operational procedures
- Safe Work Method Statements (SWMS) and site risk assessment process
- Operation of HV and LV electrical apparatus
- Interpretation of HV single line diagrams
- Systematic approach to switching operations
- Hazard identification and Operator protection
- Use of personal protective equipment (PPE) and safety equipment
- Use of Operating Instructions
- Communications protocols
- Earthing Procedures
- Issue / cancellation of Electrical Access Authority/s for workers working on or in the vicinity of HV apparatus
- Ferro Resonance
- Restoration of supply
- Fault finding and emergency response
- Understanding of Protection Schemes

Assessment The practical assessment should remain flexible to allow

where possible, the utilisation of scheduled work for

assessment

Frequency 3 Yearly

Learning outcomes On successful completion of this module the learner should

be able to:

Learning Outcome 1 Locate, interpret, and apply appropriate Regulations, The

Green Book and Network Operator Switching procedures

relating to HV electrical safety

Assessment Criteria1.1 Describe the structure of industry standards in relation to electrical safety

1.2 Reference the Green Book for clauses related to safe work procedures while performing switching operations.

1.3 Reference Network Operator Switching Procedures

1.4 Describe the function, roles and responsibilities of a Distribution Switching Overhead Operator

1.5 Identify Safe Work Method Statements (SWMS) and site risk assessment process for HV switching

1.6 Identify the personal protective equipment (PPE) and safety equipment required for the safe operation of high voltage switchgear

1.7 Identify communications process with the Control Centre, work parties and other operators

1.8 Identify communications process for incident reporting in regards to switching operations

Assessi

Learning Outcome 2

Identify the function, operation, and precautions associated with high voltage electrical apparatus and associated hardware

Assessment Criteria

- 2.1 Identify the capabilities of the typical range of switchgear installed on the overhead distribution network
- 2.2 Identify the use of caution and danger tags
- 2.3 Identify the precautions necessary in relation to Ferro resonance
- 2.4 Describe the method of operation, and demonstrate the operation of typical high voltage switchgear and apparatus installed on the overhead distribution network
- 2.5 Describe a pre-operation inspection and the associated hazards relative to the switchgear being operated
- 2.6 Describe the Network Operator nomenclature standards and switch numbering
- 2.7 Identify the procedure for commissioning new apparatus including new transformers, pre-commissioning tests, insulation tests, no-load voltage tests, phase sequence tests and phase-out tests
- 2.8 Identify the processes and precautions required when operating interconnected feeders
- 2.9 Describe the operation and precautions associated with distribution overhead electrical systems

Learning Outcome 3

Interpret HV single line diagrams and prepare a switching program

- 3.1 Identify the meaning of various symbols used in single line diagrams
- 3.2 Read a single line diagram, check that it is correct with the network system

Learning Outcome 4

Demonstrate switching processes, procedures and communication protocol for the safe switching of the distribution overhead network

Assessment Criteria

- 4.1 Demonstrate accurate and effective communications with the Control Centre
- 4.2 Demonstrate the use of a switching instruction while performing switching operations
- Demonstrate a pre-operation inspection and describe 4.3 the hazards that are relative to the switchgear being operated
- 4.4 Demonstrate the application of a systematic approach to switching
- 4.5 Demonstrate the operation of a range of high voltage switchgear installed on the distribution network

Learning Outcome 5

Demonstrate effective earthing practices and procedures when earthing HV electrical apparatus for access

Assessment Criteria

- 5.1 Identify the requirements for isolation from primary and secondary voltages necessary for safe access under access authority conditions
- 5.2 Identify the dangers of the application of earth devices to high voltage apparatus
- Identify and correctly use personal protective equipment (PPE) and safety equipment required for the safe application of high voltage earthing devices and demonstrate the correct use
- 5.4 Demonstrate the application of a systematic approach to earthing
- 5.5 Describe the priority earthing system

Learning Outcome 6

Describe the purpose, preparation and procedure for use of operational forms, access authorities and permits associated with HV switching

- 6.1 Identify the options available for managing work in the vicinity of high voltage apparatus
- 6.2 Describe the need for maintaining security of high voltage installations, and for controlling the activity of people in these areas
- 6.3 Describe the access permit procedure, the responsibilities of people involved and its application in the workplace
- Identify the requirements of additional access authorities associated with access to high voltage apparatus

Learning Outcome 7	Issue and cancel access authorities appropriate to the nominated tasks
Assessment Criteria	7.1 Identify the procedures for the completion, issue and cancellation of an Electrical Access Authority
	7.2 Prepare an Electrical Access Authority in accordance with accepted procedures and practices, which clearly defines safety precautions relating to access to high voltage apparatus
	7.3 Conduct preliminary discussions with work party ensuring that the task can commence safely and issue an Electrical Access Authority for a specified task
	7.4 Confirm the work is completed, the apparatus is fit for service and cancel the Electrical Access Authority in accordance with procedures
Learning Outcome 8	Describe the functions and operation of common high voltage protection systems and suppression functionality
Assessment Criteria	8.1 Describe the functions and operation of overcurrent and earth leakage protection
	8.2 Identify suppression requirements when undertaking network switching
Learning Outcome 9	Identify the requirements for patrolling and switching the HV network in fault situations
Assessment Criteria	9.1 Describe how to effectively patrol a faulted section of line to identify the probable cause
	O.O. Evaluin house afficiently include the faulted appropriate

- 9.2 Explain how to efficiently isolate the faulted apparatus and restore supply under direction of the Control Centre
- 9.3 Describe the actions needed to liaise with other emergency services to make a faulted area safe
- 9.4 Demonstrate the actions necessary to coordinate on site repairs with work parties

Module purpose

This module provides the learner with the knowledge and skills to perform High Voltage Electrical Switching on all distribution field apparatus including metal enclosed switchgear and the underground network

Prerequisite

UETDRIS017 - Perform high voltage field switching operation to a given schedule. UETDRIS018 - Perform low voltage field switching operation to a given schedule. These Competency Standard Units shall be delivered by an RTO

For whom

All workers required to perform switching on the high voltage Distribution Network

Summary of content

- The Green Book
- Roles and responsibilities
- **Network Operators Operational procedures**
- Safe Work Method Statements (SWMS) and site risk assessment process
- Operation of HV and LV electrical apparatus including underground and Metal clad switchgear
- Interpretation of HV single line diagrams
- Systematic approach to switching operations
- Hazard identification and Operator protection
- Personal protective equipment (PPE) and safety equipment
- Use of Operating Instructions
- Communications protocols
- Earthing Procedures
- Issue / cancellation of Electrical Access Authority/s for workers working on or in the vicinity of HV apparatus
- Ferro Resonance
- Restoration of supply
- Fault finding and emergency response
- Understanding of Protection schemes

Assessment

The practical assessment should remain flexible to allow where possible, the utilisation of scheduled work for assessment

Frequency

3 Yearly

Learning outcomes

On successful completion of this module the learner should be able to:

Learning Outcome 1

Locate, interpret, and apply appropriate VESI Regulations, The Green Book and Network Operators Switching procedures relating to HV electrical safety

Assessment Criteria

- 1.1 Describe the structure of industry standards in relation to electrical safety
- 1.2 Reference the Green Book for clauses related to safe work procedures while performing switching operations
- 1.3 Reference Network Operator Switching Procedures
- 1.4 Describe the function, roles and responsibilities of a Distribution Switching Overhead and Underground Operator
- 1.5 Identify Safe Work Method Statements (SWMS) and site risk assessment process for HV Switching
- 1.6 Identify the personal protective equipment (PPE) and safety equipment required for the safe operation of high voltage switchgear
- 1.7 Identify communications process with the Control Centre, work parties and other operators
- 1.8 Identify communications process for incident reporting in regards to switching operations

Learning Outcome 2

Identify the function, operation, and precautions associated with high voltage electrical apparatus and associated hardware

- 2.1 Identify the capabilities of the typical range of switchgear installed on the overhead and underground distribution network
- 2.2 Identify the use of caution and danger tags
- 2.3 Identify the precautions necessary in relation to Ferro resonance
- 2.4 Describe the method of operation, and demonstrate the operation of typical high voltage switchgear installed on the overhead and underground distribution network
- 2.5 Describe a pre-operation inspection and the associated hazards relative to the switchgear being operated
- 2.6 Describe the methods of operation of transformers and the reasons for this method including the changing of taps

- 2.7 Identify the procedure for commissioning new apparatus e.g. new transformers pre-commissioning tests, insulation tests, no-load voltage tests, phase sequence tests and phase-out tests
- 2.8 Identify the methods of operation and precautions associated with distribution overhead and underground electrical systems

Learning Outcome 3

Interpret HV single line diagrams and prepare a switching program

Assessment Criteria

- 3.1 Identify the meaning of various symbols used in single line diagrams
- 3.2 Read a single line diagram, check that it is correct with the network system

Learning Outcome 4

Demonstrate switching processes, procedures and communication protocol for the safe switching of the distribution overhead and underground network

Assessment Criteria

- 4.1 Demonstrate accurate and effective communications with the Control Centre
- 4.2 Demonstrate the use of a switching instruction while performing switching operations
- 4.3 Demonstrate a pre-operation inspection and describe the hazards that are relative to the switchgear being operated
- 4.4 Demonstrate the application of a systematic approach to switching
- Demonstrate the operation of a range of high voltage 4.5 switchgear installed on the distribution overhead and underground network

Learning Outcome 5

Demonstrate effective earthing practices and procedures when earthing HV electrical apparatus for access

- 5.1 Identify the requirements for isolation from primary and secondary voltages necessary for safe access under access authority conditions
- 5.2 Identify the dangers of the application of earth devices to high voltage apparatus
- 5.3 Identify and correctly use personal protective equipment (PPE) and safety equipment required for the safe application of high voltage earthing devices
- 5.4 Demonstrate the application of a systematic approach to earthing
- 5.5 Describe the priority earthing system

Learning Outcome 6

Describe the purpose, preparation and procedure for use of operational forms, access authorities and permits associated with HV switching

Assessment Criteria

- 6.1 Identify the options available for managing work in the vicinity of high voltage apparatus
- 6.2 Describe the need for maintaining security of high voltage installations, and for controlling the activity of people in these areas
- 6.3 Describe the access permit procedure, the responsibilities of people involved and its application in the workplace
- 6.4 Identify the requirements of additional access authorities associated with access to high voltage apparatus

Learning Outcome 7

Issue and cancel access authorities appropriate to the nominated tasks

Assessment Criteria

- 7.1 Identify the procedures for the completion, issue and cancellation of an Electrical Access Authority
- 7.2 Prepare an Electrical Access Authority in accordance with accepted procedures and practices, which clearly defines safety precautions relating to access to high voltage apparatus
- 7.3 Conduct preliminary discussions with work party ensuring that the task can commence safely and issue an Electrical Access Authority for a specified task
- Confirm work is completed and cancel Electrical Access 7.4 Authority in accordance with procedures

Learning Outcome 8

Describe the functions and operation of common high voltage protection systems and suppression functionality

- 8.1 Describe the functions and operation of overcurrent and earth leakage protection
- 8.2 Identify suppression requirements when undertaking network/interconnected network switching

Learning Outcome 9	Identify the requirements for patrolling and switching the HV network in fault situations
Assessment Criteria	9.1 Describe how to effectively patrol a faulted section of line to identify the probable cause
	9.2 Explain how to efficiently isolate the faulted apparatus and restore supply under direction of the Control Centre
	9.3 Describe the actions needed to liaise with other emergency services to make a faulted area safe
	9.4 Demonstrate the actions necessary to coordinate on site repairs with work parties

High Voltage (HV) Switching – ZSS (Zone Substation Switching)

Module purpose This module provides the learner with the knowledge and

skills to perform High Voltage Electrical Switching on all Sub-

Transmission and Distribution apparatus within zone

substations

Prerequisite UETDRSB001 - Perform substation switching operations to a

given schedule. This Competency Standard Units shall be

delivered by an RTO

For whom All workers required to perform switching on the high voltage

Sub Transmission and Distribution Network in Zone

Substations

Summary of content • The Green Book

Roles and responsibilities

Network Operators Operational procedures

 Safe Work Method Statements (SWMS) and site risk assessment process

Operation of HV and LV electrical apparatus

• Interpretation of HV single line diagrams

Systematic approach to switching operations

Hazard identification and Operator protection

Personal protective equipment (PPE) and safety equipment

Use of Operating Instructions

Communications protocols

Earthing Procedures

 Issue / cancellation of Electrical Access Authority/s for workers working on or in the vicinity of HV apparatus

Restoration of supply

Fault finding and emergency response

Understanding of Protection schemes

Learning outcomes On successful completion of this module the learner should

be able to:

Learning Outcome 1

Locate, interpret, and apply appropriate Regulations, The Green Book and Network Operators switching procedures relating to HV electrical safety

Assessment Criteria

- 1.1 Describe the structure of industry standards in relation to electrical safety
- 1.2 Reference the Green Book for clauses related to safe procedures while performing switching operations.
- Reference Network Operator Switching Procedures 1.3
- Describe the function, roles and responsibilities of a Zone Substation Switching Operator
- 1.5 Identify Safe Work Method Statements (SWMS) and site risk assessment process for HV switching
- Identify the personal protective equipment (PPE) and safety equipment required for the safe operation of HV switchgear
- 1.7 Identify communications process with the Control Centre, work parties and other operators
- Identify communications process for incident reporting in regards to switching operations

Learning Outcome 2

Identify the function, operation, and precautions associated with high voltage electrical apparatus and associated hardware

- Identify the capabilities of the typical range of switchgear installed in a Zone Substation
- 2.2 Identify the use of caution and danger tags
- 2.3 Describe the method of operation of typical high voltage switchgear and plant installed in a Zone Substation
- 2.4 Describe a pre-operation inspection and the associated hazards relative to the switchgear being operated
- 2.5 Describe the Network Operator nomenclature standards
- 2.6 Identify the procedure for commissioning new apparatus e.g. new transformers pre-commissioning tests, insulation tests, no-load voltage tests, phase sequence tests and phase-out tests
- 2.7 Describe the operation and precautions associated with Distribution and Sub-Transmission plant and equipment

High Voltage (HV) Switching - 7SS (Zone Substation Switching)

High Voltage (HV) Switching – ZSS (Zone Substation Switching)		
Learning Outcome 3	Interpret HV single line diagrams and prepare a switching program	
Assessment Criteria	3.1 Identify the meaning of various symbols used in single line diagrams	
	3.2 Read a single line diagram, check that it is correct with the network system	
Learning Outcome 4	Demonstrate switching processes, procedures and communication protocol for the safe switching of Zone Substations	
Assessment Criteria	4.1 Demonstrate accurate and effective communications with the Control Centre	
	4.2 Demonstrate the use of a switching instruction while performing switching operations	
	4.3 Demonstrate a pre-operation inspection and describe the hazards that are relative to the switchgear being operated	
	4.4 Demonstrate the application of a systematic approach to switching	
	4.5 Demonstrate the operation of a range of HV switchgear installed in a Zone Substation	
Learning Outcome 5	Demonstrate effective communication protocol and earthing practices and procedures when earthing HV electrical apparatus for access	
Assessment Criteria	5.1 Identify the requirements for isolation from primary and secondary voltages necessary for safe access under access authority conditions	
	5.2 Identify the dangers of the application of earth devices to high voltage apparatus	

- to high voltage apparatus
- 5.3 Identify and correctly use personal protective equipment (PPE) and safety equipment required for the safe application of high voltage earthing devices
- 5.4 Demonstrate the application of a systematic approach to earthing

High Voltage (HV) Switching – ZSS (Zone Substation Switching)

Learning Outcome 6

Describe the purpose, preparation, and procedure for use of operational forms, access authorities and permits associated with HV switching

Assessment Criteria

- 6.1 Identify the various formal options available for managing work in the vicinity of high voltage apparatus
- 6.2 Describe the need for maintaining security of high voltage installations, and for controlling the activity of people in these areas
- 6.3 Prepare barriers and signs for the safe access to nominated high voltage apparatus
- 6.4 Describe the Access Authority procedure, the responsibilities of people involved and its application in the workplace
- 6.5 Identify the requirements of additional access authorities associated with access to high voltage apparatus

Learning Outcome 7

Issue and cancel access authorities appropriate to the nominated tasks

- 7.1 Identify the procedures for the completion, issue and cancellation of an Electrical Access Authority
- 7.2 Prepare an Electrical Access Authority in accordance with accepted procedures and practices, which clearly defines safety precautions relating to access to high voltage apparatus
- 7.3 Conduct preliminary discussions with work party ensuring that the task can commence safely and issue an Electrical Access Authority for a specified task
- 7.4 Confirm work is completed and cancel Electrical Access Authority in accordance with procedures

Learning Outcome 8

Describe the functions and operation of common high voltage protection systems and suppression functionality

Assessment Criteria

- 8.1 Describe the functions and operation of protection systems
- 8.2 Identify relay indications that would occur for nominated faults on the high voltage system
- 8.3 Identify protection schemes
- 8.4 Describe the control circuit and supply system for protection systems

Learning Outcome 9

Identify the requirements for identifying and switching the HV network in fault situations

- 9.1 Describe how to effectively identify a faulted section of apparatus or plant
- 9.2 Explain how to efficiently isolate the faulted apparatus and restore supply under direction of the Control Centre
- 9.3 Describe the actions needed to liaise with other emergency services to make a faulted area safe
- 9.4 Demonstrate the actions necessary to coordinate on site repairs with work parties

Module purpose This module provides the learner with the knowledge and

skills to perform High Voltage Electrical Switching on all distribution-controlled feeder apparatus in Terminal Stations

Prerequisite UETDRSB001 - Perform substation switching operations to a

given schedule This Competency Standard Units shall be

delivered by an RTO

Learning outcomes On successful completion of this module the learner should

be able to:

Learning Outcome 1

Locate, interpret, and apply appropriate Regulations, The Blue Book and The Green Book and Network Operators switching procedures relating to HV electrical safety

Assessment Criteria

- 1.1 Describe the structure of industry standards in relation to electrical safety
- 1.2 Reference The Blue Book and The Green Book clauses related to safe procedures while performing switching operations.
- 1.3 Reference Network Operator Switching Procedures
- 1.4 Describe the function, roles and responsibilities of a Switching Operator for Distribution controlled feeder apparatus in Terminal Stations
- 1.5 Identify Safe Work Method Statements (SWMS) and site risk assessment process for HV switching
- 1.6 Identify the personal protective equipment (PPE) and safety equipment required for the safe operation of HV switchgear
- 1.7 Identify communications process with the Control Centre, work parties and other operators
- 1.8 Identify communications process for incident reporting in regards to switching operations

Learning Outcome 2

Identify the function, operation, and precautions associated with high voltage electrical apparatus and associated hardware

- 2.1 Identify the capabilities of the typical range of switchgear installed in a Terminal Station
- 2.2 Identify the use of caution and danger tags
- 2.3 Describe the method of operation of typical high voltage switchgear and plant installed in a Terminal Station
- 2.4 Describe a pre-operation inspection and the associated hazards relative to the switchgear being operated
- 2.5 Describe the Network Operator nomenclature standards
- 2.6 Identify the procedure for commissioning new apparatus e.g. new transformers pre-commissioning tests, insulation tests, no-load voltage tests, phase sequence tests and phase-out tests
- 2.7 Demonstrate an understanding of the operation and precautions associated with Distribution and Sub-Transmission plant and equipment

Lagratia a Outagas 2	
Learning Outcome 3	Interpret HV single line diagrams and prepare a switching program
Assessment Criteria	3.1 Identify the meaning of various symbols used in single line diagrams
	3.2 Read a single line diagram, check that it is correct with the network system
Learning Outcome 4	Demonstrate switching processes, procedures, and communication protocol for the safe switching of Terminal Substations
Assessment Criteria	4.1 Demonstrate accurate and effective communications with the Control Centre
	4.2 Demonstrate the use of a switching instruction while performing switching operations
	4.3 Demonstrate a pre-operation inspection and describe the hazards that are relative to the switchgear being operated
	4.4 Demonstrate the application of a systematic approach to switching
	4.5 Demonstrate the operation of a range of HV switchgear installed in a Terminal Station
Learning Outcome 5	Demonstrate effective communication protocol and earthing practices and procedures when earthing HV electrical apparatus for access
Assessment Criteria	5.1 Identify the requirements for isolation from primary and secondary voltages necessary for safe access under access authority conditions
	5.2 Identify the dangers of the application of earth devices

- 5.2 Identify the dangers of the application of earth devices to high voltage apparatus
- 5.3 Identify and correctly use personal protective equipment (PPE) and safety equipment required for the safe application of high voltage earthing devices
- 5.4 Demonstrate the application of a systematic approach to earthing

Learning Outcome 6

Describe the purpose, preparation and procedure for use of operational forms, access authorities and permits associated with HV switching

Assessment Criteria

- 6.1 Identify the various formal options available for managing work in the vicinity of high voltage apparatus
- 6.2 Describe the need for maintaining security of high voltage installations, and for controlling the activity of people in these areas
- 6.3 Prepare barriers and signs for the safe access to nominated high voltage apparatus
- 6.4 Describe the Access Authority procedure, the responsibilities of people involved and its application in the workplace
- 6.5 Identify the requirements of additional access authorities associated with access to high voltage apparatus

Learning Outcome 7

Issue and cancel access authorities appropriate to the nominated tasks

- 7.1 Identify the procedures for the completion, issue and cancellation of an Electrical Access Authority
- 7.2 Prepare an Electrical Access Authority in accordance with accepted procedures and practices, which clearly defines safety precautions relating to access to high voltage apparatus
- 7.3 Conduct preliminary discussions with work party ensuring that the task can commence safely and issue an Electrical Access Authority for a specified task
- 7.4 Confirm work is completed and cancel Electrical Access Authority in accordance with procedures

Learning Outcome 8	Describe the functions and operation of common high voltage protection systems and suppression functionality
Assessment Criteria	8.1 Describe the functions and operation of protection systems
	8.2 Identify relay indications that would occur for nominated faults on the high voltage system
	8.3 Identify protection schemes
	8.4 Describe the control circuit and supply system for protection systems
Learning Outcome 9	Identify the requirements for identifying and switching the HV network in fault situations
Assessment Criteria	9.1 Describe how to effectively identify a faulted section of apparatus or plant
	9.2 Explain how to efficiently isolate the faulted apparatus and restore supply under direction of the Control Centre
	9.3 Describe the actions needed to liaise with other emergency services to make a faulted area safe
	9.4 Demonstrate the actions necessary to coordinate on site repairs with work parties

Transmission and Sub Transmission Network in Terminal

Stations

Summary of content • The Green Book and The Blue Book

Roles and responsibilities

Network Operators Operational procedures

 Safe Work Method Statements (SWMS) and site risk assessment process

Operation of HV and LV electrical apparatus

• Interpretation of HV single line diagrams

Systematic approach to switching operations

Hazard identification and Operator protection

Personal protective equipment (PPE) and safety equipment

Use of Operating Instructions

Communications protocols

Earthing Procedures

 Issue / cancellation of Electrical Access Authority/s for workers working on or in the vicinity of HV apparatus

Restoration of supply

Fault finding and emergency response

Understanding of Protection schemes

Understand an interpret system metering instruments

Understand and switch DC supplies to maintain supply

Awareness of HV field strengths in switchyards

Assessment The practical assessment should remain flexible to allow

where possible, the utilisation of scheduled work for

assessment

Frequency 3 Yearly

Learning outcomes

On successful completion of this module the learner should be able to:

Learning Outcome 1

Locate, interpret, and apply appropriate Regulations, The Blue Book and The Green Book and Network Operators switching procedures relating to HV electrical safety

Assessment Criteria

- 1.1 Describe the structure of industry standards in relation to electrical safety
- 1.2 Reference The Blue Book and The Green Book and Network Operators Procedures
- 1.3 Describe the function, roles and responsibilities of a Switching Operator in Terminal Stations.
- 1.4 Identify Safe Work Method Statements (SWMS) and site risk assessment process for HV switching
- 1.5 Identify the personal protective equipment (PPE) and safety equipment required for the safe operation of HV switchgear
- 1.6 Identify communications process with the Control Centre, work parties and other operators
- 1.7 Identify communications process for incident reporting in regards to switching operations

Learning Outcome 2

Identify the function, operation, and precautions associated with high voltage electrical apparatus and associated hardware

- 2.1 Identify the capabilities of the typical range of switchgear installed in a Terminal Station
- 2.2 Identify the use of caution and danger tags
- 2.3 Describe the method of operation of typical high voltage switchgear installed in Terminal Station
- 2.4 Describe a pre-operation inspection and the associated hazards relative to the switchgear being operated
- 2.5 Describe the Network Operator nomenclature standards
- 2.6 Identify the procedure for commissioning new apparatus e.g. new transformers pre-commissioning tests, insulation tests, no-load voltage tests, phase sequence tests and phase-out tests
- 2.7 Describe the operation and precautions associated with Transmission and Sub Transmission equipment

Learning Outcome 3

Interpret HV single line diagrams and prepare a switching program

Assessment Criteria

- 3.1 Identify the meaning of various symbols used in single line diagrams
- 3.2 Read a single line diagram, check that it is correct with the network system

Learning Outcome 4

Demonstrate switching processes, procedures and communication protocol for the safe switching in Terminal **Stations**

Assessment Criteria

- 4.1 Demonstrate accurate and effective communications with the Control Centre
- 4.2 Demonstrate the use of a switching instruction while performing switching operations
- 4.3 Describe a pre-operation inspection and the associated hazards relative to the switchgear being operated
- 4.4 Demonstrate the application of a systematic approach to switching
- 4.5 Demonstrate the operation of a range of HV switchgear installed in a Terminal Station

Learning Outcome 5

Demonstrate effective communication protocol and earthing practices and procedures when earthing HV electrical apparatus for access

- 5.1 Identify the requirements for isolation from primary and secondary voltages necessary for safe access under access authority conditions
- 5.2 Identify the dangers of the application of earth devices to high voltage apparatus
- 5.3 Identify and correctly use personal protective equipment (PPE) and safety equipment required for the safe application of high voltage earthing devices
- 5.4 Demonstrate the application of a systematic Approach to Earthing

Learning Outcome 6

Describe the purpose, preparation and procedure for use of operational forms, access authorities and permits associated with HV switching

Assessment Criteria

- Identify the various formal options available for managing work in the vicinity of high voltage apparatus
- 6.2 Describe the need for maintaining security of high voltage installations, and for controlling the activity of people in these areas
- 6.3 Prepare barriers and signs for the safe access to nominated high voltage apparatus
- Describe the Access Authority procedure, the 6.4 responsibilities of people involved and its application in the workplace
- 6.5 Identify the requirements of additional access authorities associated with access to high voltage apparatus

Learning Outcome 7

Issue and cancel access authorities appropriate to the nominated tasks

- 7.1 Identify the procedures for the completion, issue and cancellation of an Electrical Access Authority
- 7.2 Prepare an Electrical Access Authority in accordance with accepted procedures and practices, which clearly defines safety precautions relating to access to high voltage apparatus
- 7.3 Conduct preliminary discussions with work party ensuring that the task can commence safely and issue an Electrical Access Authority for a specified task
- Confirm work is completed and cancel Electrical Access Authority in accordance with procedures

High Voltage (HV) Switching – TS (Terminal Switching)

Learning Outcome 8	Describe the functions and operation of common high voltage protection systems and suppression functionality		
Assessment Criteria	8.1 Describe the functions and operation of protection systems		
	8.2 Identify relay indications that would occur for nominated faults on the high voltage system		
	8.3 Identify protection schemes		
	8.4 Describe the control circuit and supply system for protection systems		
Learning Outcome 9	Describe the process of identifying and switching the HV network in fault situations		
Assessment Criteria	9.1 Describe how to effectively identify a faulted section of apparatus		
	9.2 Explain how to efficiently isolate the faulted apparatus and restore supply under direction of the Control Centre		
	9.3 Describe the actions needed to liaise with emergency services		
	9.4 Demonstrate the actions necessary to coordinate on site repairs with work parties		

This module will provide the learner with the knowledge and skills to enable them to work on or near Live Low Voltage apparatus

For whom

All workers who are required to work on live low voltage apparatus at ground level. This program does not include or replace training required for Cable Jointers or Lineworkers performing their work

Frequency

Three yearly

Summary of content

- The Green Book
- Industry work practices and procedures
- Live low voltage work practices and procedures
 - Protection from electric shock
 - Personal Protective Equipment
- Live LV panel rescue
- Risk assessment
- Role and responsibility of the "Safety Observer
- Asset identification and their inherent hazards
- Specialised equipment
 - Insulating mats and covers
 - Insulated tools

Learning outcomes

On successful completion of the module the learner should be able to:

Learning outcome 1

Identify the general safe work practices, safety instructions, organisational policies and procedures.

- 1.1 Identify and explain various clauses within The Green Book relating to working on Live Low Voltage
- Describe the risk assessment process and identify the risks and controls associated with working on ground level live low voltage apparatus
- 1.3 Describe the correct set up for a rescue situation

Plan, prepare and carry out Live LV electrical work at Ground level

Assessment criteria

- 2.1 Identify and document the risks and controls appropriate to the task
- 2.2 Identify and correctly use personal protective equipment (PPE) and safety equipment for working on live low voltage apparatus
- 2.3 Prepare work site to enable work to be performed in a safe manner, and in accordance with regulatory requirements
- 2.4 Perform appropriate work methods to replace/install energised LV electrical apparatus and associated hardware
- 2.5 Demonstrate safe working practices and procedures associated with working on live low voltage apparatus
- 2.6 Demonstrate the correct setup for a live LV panel rescue

Learning Outcome 3

Identify precautions required for working safely on conductive structures

Assessment criteria

- 3.1 Identify the associated risks in regards to conductive structures
- 3.2 Describe the principles of personal separation
- 3.3 Describe the work practices for work performed on or near conductive structures

Learning outcome 4

Identify the requirements and responsibilities of a Safety Observer in relation to Live LV work

- 4.1 Identify the roles and responsibilities of a safety observer/s during a Live LV task
- 4.2 Identify environmental influences that may contribute to distraction of a safety observer
- 4.3 Identify the ergonomic requirements in relation to the positioning of the safety observer to be and to remain effective
- 4.4 Identify methods of communication between the safety observer and the Live LV worker/s
- 4.5 Demonstrate an understanding of the importance of accepting safety instruction & warnings from a safety observer

This module provides the learner with the knowledge and skills to complete an "Application Form" for specified types of work

This module can be used for both refresher training and initial training

For whom

All workers required to make application for specified types of

Frequency

Three yearly

Summary of content

- Relevant clauses from The Blue Book and The Green Book
- Why an Application is used
- When an Application is required
- Purpose of the Application
- Planning timeframes for lodging Applications
- The "Application For..." form
 - Information required on the form
 - Associated information required
- Overview of associated forms
 - ~ Electrical Access Authority
 - ~ Vicinity Authority
 - ~ Permit to Work
 - ~ Sanctions for Testing
 - ~ Statement of Condition of Apparatus/Plant
 - Notice of Work on Apparatus
- Job Planning
 - ~ Identify the job location
 - ~ Identify the work to be done
 - ~ Identify known hazards
 - Determine special requirements
- Practical Application writing

Learning outcomes

On successful completion of this module the learner should be able to:

Demonstrate an understanding of the principles and responsibilities of the applicant when making applications for work on various electrical apparatus

Assessment criteria

- Identify the Blue Book and the Green Book clauses 1.1 applicable to making an application
- 1.2 Identify the reasons why an application is necessary, its purpose and when an application is required
- Identify the "Application For..." form and the 1.3 requirements to complete an application for nominated tasks
- 1.4 Identify the Network operation requirements for nominated tasks and timeframes, involved with the booking of the network and or resources and the timely delivery of paperwork
- 1.5 Describe the responsibilities of the applicant in relation to preparing and submitting an application

Learning outcome 2

Identify various types of Access Authorities which may be applied for on the Application Form and the associated information required

- 2.1 Describe the requirements for application for:
 - **Electrical Access Permit**
 - Sanction for Tests
 - Authority to carry out maintenance using live line procedures
 - Notification to work on apparatus
 - Live Line work / Auto reclose suppressions
 - Statements of condition of plant
 - High Voltage Switching / Plant Outages
 - Vicinity Authority
 - Permit to Work
 - Statement of Isolation of Low Voltage Apparatus
- 2.2 Describe the relevant documentation to be submitted with each application for the range of application types
- 2.3 Interpret design information and electrical diagrams associated with the job

Make Application for

Learning outcome 3	Successfully prepare an application in relation to job
--------------------	--

planning, design criteria and resource requirements

- **Assessment criteria** 3.1 Identify the job location
 - 3.2 Identify the work to be done
 - 3.3 Identify known hazards
 - 3.4 Determine special requirements
 - 3.5 Determine resource requirements
 - 3.6 Prepare practical examples of applications

This module provides the learner with the knowledge and skills to enable them to isolate & make low voltage dead

For whom

Qualified Lineworkers and Cable Jointers who have the required LV field switching competency and undertake LV field switching

Frequency

3 Yearly

Summary of content

- The Green Book
- Industry work practices and procedures
- Isolating & making low voltage dead
- LV Access Authority/Permits/SILV's
- Restoring supply
- Paralleling phase test, primary voltage differences
- Switch wire, multi phasing
- Risk Assessment

Learning outcomes

On successful completion of the module the learner should be able to:

Learning outcome 1

Identify the policy, procedures, safety instructions and work practices for Making LV Dead

- Identify and explain various clauses within The Green Book on Low Voltage Electrical Apparatus relating to making LV Dead
- 1.2 Describe the risk assessment process and identify and document the risks and controls appropriate to the task
- Describe the requirements for access to LV apparatus 1.3 under Access Authority conditions
- 1.4 Describe the requirements for paralleling including; phase testing and testing for primary voltage differences
- Identify the various LV Access Authority/Permits and describe the circumstances where they are used

Isolate, make dead and restore supply to a section of LV apparatus

- 2.1 Demonstrate the safe working practices and work methods used to operate energised LV apparatus
- 2.2 Demonstrate isolating and making LV apparatus dead
- 2.3 Prepare an Electrical Access Permit in accordance with Network Operator procedures
- Confirm work is completed and cancel Electrical Access Permit in accordance with Network procedures
- 2.5 Demonstrate the method to remove LV bonder/s and restore supply

This module provides the learner with the knowledge and skills to identify, recognise the need for, and adopt methods to control manual handling risks, thereby reducing the frequency of injuries

This module can be used for both refresher training and initial training

For whom

All field workers who carry out manual handling tasks

Frequency

3 Yearly

Summary of content

- Occupational Health & Safety Act 2004
- Occupational Health and Safety Regulations 2017
- Hazardous Manual Handling Compliance Code 2019
- Risk Assessment and Control
- Effects of manual handling on the body
- Factors resulting in manual handling injuries
- Preventive back and neck care
- Manual handling techniques
- Control strategies
 - Work organisation
- Job & task designLocal manual handling issues

Learning outcomes

On successful completion of this module the learner should be able to:

Learning outcome 1

Identify the regulations and hazards associated with Manual Handling in the workplace

Assessment criteria

- Identify the regulatory requirements for Manual Handling in the workplace
- 1.2 Undertake risk identification, risk assessment and risk control for tasks involving manual handling in the local work environment

Learning outcome 2

Demonstrate safe manual handling techniques

- 2.1 Identify workplace and personal factors, which may result in manual handling injuries, and implement risk control strategies
- 2.2 Apply the safe principles of manual handling required to lift, push, pull, carry & restrain

Measuring Conductor Heights Using Telescopic Measuring Sticks

Module purpose

This module provides the learner with the knowledge and skills to measure low and/or high voltage conductor heights using a telescopic measuring stick

This module can be used for both refresher training and initial training

For whom

Workers whose task involves the use of insulated sticks as measuring devices on, or in the vicinity of, high and/or low voltage network subject to Network Operator approval. This does not include workers who have the required competencies (e.g. Lineworker, HV switching Operator) in HV and/or LV switching dependant on the voltage being measured.

Frequency

Three yearly

Summary of content

- The Green Book
 - Safe approach distances
 - Personal Protective Equipment
 - ~ Fit state for work
 - Use and inspection of Operating and HV Live Work Sticks
 - Contact with live HV conductors by means of appliances
- Risk / Hazard assessment
- Electrical Distribution System
 - ~ Apparatus recognition
 - System voltage recognition (Low and High Voltages)
- Care and use of insulated measuring sticks
 - ~ Insulated and tested portions
 - ~ Safe use of telescopic sticks
 - Methods of control
 - Knocking and bumping fuses
 - Clashing conductors
- Traffic Management awareness

On successful completion of this module the learner should be able to:

Learning outcome 1

Describe the function, roles and responsibilities required of a worker measuring conductor height using a telescopic stick

Assessment criteria

- Identify and explain clauses within The Green Book relating to the general safety requirements
- Identify and explain clauses within The Green Book relating to contact with live HV conductors by means of appliances
- 1.3 Identify and explain clauses within The Green Book relating to the work in the vicinity of electrical apparatus.
- 1.4 Identify and explain clauses within The Green Book relating to the safe approach to electrical apparatus.
- Identify the use and application of operational procedures related to measuring conductor height with a telescopic stick.
- Describe the risk assessment process including SWMS and JSA's and identify the risks and controls associated with measuring conductor heights using a telescopic stick.

Learning outcome 2

Identify electrical apparatus, equipment and voltages within the Victorian Electrical Distribution System

Assessment criteria

- 2.1 Identify HV & LV electrical apparatus and equipment used within the electrical distribution networks.
- 2.2 Identify the Voltages used within the electrical distribution networks.

Learning outcome 3

Identify techniques for the safe use of Telescopic Sticks in relation to measuring the height of conductors

- 3.1 Identify the relevant enterprise procedures for the safe use of Telescopic Sticks in relation to measuring the height of conductors.
- 3.2 Identify the construction types that can be measured with the safe use of measuring height sticks
- Identify the care and maintenance requirements for HV insulating sticks including:
 - Storage
 - Inspection of equipment prior to use
 - · Electrical testing of HV sticks

Measuring Conductor Heights Using Telescopic Measuring Sticks

Learning outcome 4

Demonstrate the safe use of Telescopic Sticks in relation to measuring the height of conductors

Assessment criteria

- 4.1 Complete a Job Safety Assessment (JSA) prior to commencing a task including hazard identification, risk assessment and risk control
- 4.2 Demonstrate the identification of HV & LV conductors and the hazards at the worksite
- 4.3 Measure and record conductor heights at nominated locations
- 4.4 Demonstrate the correct ergonomic use of a telescopic stick

Learning outcome 5

Identify the traffic management requirements for short term work

Assessment criteria

5.1 Identify the requirements for short term works as identified in the Victorian Traffic Management Act and/or Code of Practice

No Go Zone Assessor

Please refer to the Network Operator for specific training requirements.

Frequency Three Yearly

Receive Sanction for Testing

Module purpose

This module provides the learner with the knowledge and skills to receive Sanction for Testing (SFT) as required by The Blue Book and The Green Book

This module can be used for both initial and refresher training

For whom

For High Voltage Testers who will be required to receive SFT for the purpose of gaining access to electrical apparatus to perform electrical testing that cannot be completed under the terms of an Electrical Access Permit (EAP)

Frequency

Three yearly

Summary of content

- The Blue Book and The Green Book
- Organisational Requirements
- Use of a "SFT"
- SFT information requirements
- Responsibilities of the Authorised Tester
- Responsibilities of the Tester in Charge
- Responsibilities of the Tester in Charge at a remote location
- Issue and cancellation of the SFT
 - ~ Communications process
- Dealing with changes to plant conditions, SFT conditions and an emergency on site
- Uses of isolation, earthing, tagging, locking, barriers and notices as applicable to SFT
- Hazards associated with carrying out tests in a live environment
- High potential test not shorting out current transformers
- Operation of back up earth leakage
- Identification and application of additional safety precautions to protect people, continuity of supply and the asset
- Protective Safety apparel
- Precautions for safe entry into High Voltage (HV) enclosures

On successful completion of this module the learner should be able to:

Learning outcome 1

Identify the requirements of the SFT Procedures used within the Electrical Supply Industry

Assessment criteria

- Identify and explain various clauses within The Blue Book or The Green Book relating to the Sanction for Testing Procedure and the access of HV and Low Voltage (LV) electrical apparatus under an SFT
- 1.2 Describe the information required for the completion of the SFT form
- 1.3 Define the responsibilities of the Tester in Charge and a Tester at a remote location
- 1.4 Define the responsibilities of the Authorised Tester and test party
- 1.5 Identify the communication process used between a work party and the operator including issue, cancellation and dealing with changes to plant conditions, SFT conditions and an emergency on site
- 1.6 Demonstrate an understanding of the relevant business' organisational procedures

Learning outcome 2

Identify the hazards associated with electrical apparatus in a manner other than prescribed by the EAP procedure

Assessment criteria

- Describe how isolations, earthing tagging, locking, 2.1 barriers and notices are used within the SFT process.
- 2.2 Identify the test equipment to be used and the safety hazards they may introduce, either to the apparatus, workers or the public
- 2.3 Identify and apply additional safety precautions to protect people, continuity of supply and the asset

Learning outcome 3

Demonstrate the ability to safely and effectively be a tester in charge of a test site with due consideration of the task at hand, members of the work party and the general public

- Describe the responsibilities of the Tester in Charge in 3.1 relation to:
 - ~ Forms and documents
 - ~ Risk Assessment
 - Work Procedures
 - ~ Equipment and plant
- 3.2 Demonstrate an acquired knowledge of the SFT process through participation in a practical exercise

This module provides the learner with the knowledge and skills to implement a "Safe to Approach" inspection and test procedure to high voltage electrical apparatus

This module can be used for both refresher training and initial training

For whom

All workers who perform work in the vicinity of Single Wire Earth Return (SWER) electrical apparatus

Frequency

Three Yearly

Summary of content

- The Blue Book or The Green Book
- SWER Safe to Approach procedure
- Apparatus with internal phase to earth supply
- Faulty earthing systems
 - ~ Associated dangers
 - Symptoms of faulty earth systems
 - SWER earth repair
- Equipment requirements
- Results and action to be taken
- **Energising SWER Substations**

Learning outcomes

On successful completion of this module the learner should be able to:

Learning outcome 1

Identify electrical hazards related to earthing systems

Assessment criteria

- Explain how earthing systems function.
- 1.2 Identify the dangers and symptoms associated with faulty earths in a phase to earth system

Learning Outcome 2

Safely approach apparatus with phase to earth systems

Assessment criteria

- Identify the methods used to minimise risks associated 2.1 with damaged earth systems
- 2.2 Perform a "Safe to Approach" test

Learning Outcome 3

Identify the procedure to energise a SWER substation following earthing system repairs

- Identify the possible hazards associated with energising **SWER** substations
- 3.2 Identify the methods used to energise a SWER substation upon completion of earthing system repairs and place on load

This module provides the learner with the knowledge, skills, and competencies to conduct a "Safe to Climb" test

This module can be used for both refresher training and initial training

For whom

All workers who are required to work aloft on pole structures

Frequency

Three yearly

Summary of content

Safe to Climb Test

- · Push and rope tests
- Pole types
- Categories of poles
 - ~ Serviceable
 - ~ Limited Life poles
 - ~ Unserviceable poles
- Visual inspection of poles
 - ~ Identification discs
 - ~ Fungi, wood rot, white ants
 - ~ Lightning damage, splitting, burns
 - ~ Cracked concrete, rust
 - ~ Leaning poles, hardware
- Staked and re-butted poles
- · Types of detection tests
- · Supporting leaning poles
- Ladders

Learning outcomes

On successful completion of this module the learner should be able to:

Learning outcome 1

Identify the requirements for conducting an inspection of a pole prior to climbing

- 1.1 Identify the reasons for and methods used when performing a safe to climb test prior to climbing poles
- 1.2 Identify defects that affect the strength of wood, concrete, and steel poles
- 1.3 List the categories and appropriate markings allocated to poles upon completion of an inspection
- 1.4 Identify the affect that staking and re-butting has on the classification of the pole
- 1.5 Identify the requirements for minor and major works

Safe to Climb

Learning outcome 2

Identify and demonstrate the methods used to determine a pole is safe to climb

Assessment criteria

- 2.1 Identify and demonstrate the methods of performing a safe to climb test prior to climbing a pole, (for example push or rope test)
- 2.2 Identify methods to make a pole safe to climb

Learning outcome 3

Demonstrate the knowledge and skills in the safe use of a ladder

Assessment criteria

Demonstrate the correct safe use and handling of 3.1 ladders to the relevant standards, codes of practice and regulations

Learning outcome 4

Describe the requirements to maintain balanced loads on poles during maintenance activities

- Identify the forces exerted on poles in a variety of situations including intermediate, strain, tee-off and angle poles
- 4.2 Identify the activities that may affect the forces being exerted on the structures and the possible consequences of altered loadings
- 4.3 Describe suitable methods to provide temporary support to structures where construction activities may affect the forces exerted on the structure or adjacent structures

This module provides the learner with the underpinning knowledge and skills to understand key principles of environmental management

This module can be used for both refresher training and initial training

For whom

All workers who are required to work on, near or in the vicinity of the electricity network assets

Frequency

Three yearly

Summary of content

- Environmental Legislation
- Environmental Management Systems (EMS)
- Air Emissions
- Containment of contaminated water
- Waste Management
- Chemical Management
- Flora & Fauna protection
- Weed and disease management
- Cultural Heritage
- Noise and Vibration

Learning outcomes

On successful completion of this module the learner should be able to:

Learning outcome 1

Explain the basic legal requirements of Environmental Legislation

Assessment criteria

- 1.1 State the aims and objectives of The Environment Protection Act 2017
- 1.2 Explain the Role of the Environment Protection
 Authority (EPA) and powers of their officers and how to
 deal with them
- 1.3 Define the employee's responsibilities in accordance with relevant statutory requirements

Learning outcome 2

Explain the importance of an environmental management system (EMS) and the basic elements of the system

Assessment criteria

- 2.1 Describe key areas of an EMS
- 2.2 Describe the process of reporting incidents (external and internal)

Learning outcome 3

Explain the basic principles of managing air emissions

- 3.1 Identify possible air emission sources
- 3.2 Explain why it is necessary to limit air emissions from existing sites and construction sites

Learning outcome 4	Identify the basic principles of the containment of contaminated water		
Assessment criteria	4.1	Explain why it is necessary to contain sediment runoff from worksites	
	4.2		
Learning Outcome 5	Explain the basic principles of waste management		
Assessment criteria	5.1	Explain the waste hierarchy	
	5.2	Identify possible wastes generated in the electricity supply field	
	5.3	Outline the processes for management of contaminated soil and potential acid sulphate soils (PASS)	
	5.4	Outline the processes for management of asbestos including disposal	
	5.5	Outline the processes for management of Poly Chlorinated Biphenyl (PCB) including disposal	
	5.6	Outline the processes for management of Copper Chrome Arsenate (CCA)/Creosote poles including disposal	
Learning outcome 6		scribe how to manage, store and handle chemicals uding spills and disposal of clean up materials	
Assessment criteria	6.1	State the environmental risk and impact of storage and handling of chemicals including high risk activities	
	6.2	Describe how to contain a spill effectively including reference to the Safety Data Sheet (SDS)	
	6.3	Identify a clear understanding of procedures for reporting a spill incident, who must be notified and correct disposal of spill material	
Learning outcome 7	Ider	ntify the basic principles of flora and fauna protection	
Assessment criteria	7.1	Describe what constitutes native vegetation	
	7.2	Describe why it is necessary to protect native vegetation	
	7.3	Describe the controls to protect flora and fauna	
Learning outcome 8		ntify the basic principles of weeds and diseases nagement	
Assessment criteria	8.1	Describe why it is important to prevent and contain weeds and diseases	
	8.2	Identify how to prevent and contain weeds and diseases, including vehicle hygiene	

VESI Environmental Framework

Learning outcome 9	Identify the basic principles of cultural heritage and site management	
Assessment criteria	9.1 Describe what cultural heritage encompasses and understand what activities could disturb cultural heritage	
	9.2 Detail processes for protecting cultural heritage and what to do when accidental discovery occurs	
Learning outcome 10	Identify the basic principles of noise and vibration site management	
Assessment criteria	10.1 Describe why it is important to prevent and control noise and vibration	
	10.2 Identify how to protect and control noise and vibration	

This module provides the learner with the knowledge to understand the purpose and intention of the Occupational Health & Safety (OH&S) Act and associated legislations and regulations

This module can be used for both refresher training and initial training

For whom

All VESI workers who are required to work on, near or in the vicinity of the electricity network assets

Frequency

Three yearly

Summary of content

- OH&S Act
- General duty of care
- Rights and responsibilities of employers and employees
- · Legislations and Regulations update
- Australian Standards update
- Risk Assessment process
- Incident reporting
- Prevention of Falls Regulations and Codes of Practice
- Asbestos Management
- Site Preservation
- OHS Management System
- Driving
- Noise
- Dangerous Goods and Hazardous Substances
- Confined Space
- Mobile & Portable Plant & Equipment
- Traffic Management
- Excavation Work
- Customer / Public Aggression
- Fitness for Work
- Bullying and Harassment
- Mental Health

Learning outcomes

On successful completion of this module the learner should be able to:

Learning outcome 1

State the basic legal requirements of the OH&S Act

- 1.1 State the aims and objectives of the OH&S Act
- 1.2 Explain what is meant by duty of care
- 1.3 Identify the responsibilities of employers and employees according to the OH&S Act

Identify the importance of compliance with relevant Legislation, Regulations and VESI codes of practices relating to OH&S

Assessment criteria

2.1 Describe the important features and implications of legislation relevant to the workplace

Learning outcome 3

Identify the requirements of performing a job safety assessment (JSA) to determine possible workplace hazards and assigning appropriate risk control measures

Assessment criteria

- 3.1 State the purpose of performing a JSA
- 3.2 Describe the process of hazard identification and the allocation of suitable risk control measures to overcome the identified risk

Learning outcome 4

Demonstrate the requirements for reporting accidents and incidents as required by the Energy Safe Victoria (ESV), WorkSafe Victoria and within the workplace

Assessment criteria

- Identify the employers and employees' responsibilities related to the reporting of accidents or incidents that occur in the workplace
- 4.2 Identify the information that is to be recorded in the register of injuries by the employers in the event of an incident or accident occurring

Learning outcome 5

Demonstrate an understanding of the regulatory requirements for the prevention of falls in the workplace

- Identify the responsibilities of the employer with regards 5.1 meeting the requirements of the Compliance Code "Prevention of falls in general construction 2019
- 5.2 Identify the responsibilities of the employee with regards meeting the requirements of the Compliance Code "Prevention of falls in general construction 2019
- Identify the definitions of the terms used within the Compliance Code "Prevention of falls in general construction 2019
- Describe practical examples relevant to the electrical distribution industry of:
 - Passive fall prevention
 - ~ Work Positioning systems
 - ~ Fall injury prevention systems
 - Administrative control
- 5.5 Describe the process of task assessment, risk assessment and use of the hierarchy of risk control measures

VESI Safety Framework

Learning outcome 6

Identify the hazards and regulations associated with handling material containing asbestos fibre

Assessment criteria

- 6.1 Describe the personal dangers of coming into contact with materials containing asbestos fibre
- 6.2 Identify common materials, apparatus and locations within the work environment that have been or could be identified as being an asbestos risk
- 6.3 Identify the regulatory requirements for the safe handling of materials within the work environment identified as being an asbestos risk

Wash HV Insulators

Please refer to the Network Operator for specific training requirements.

Frequency

Three Yearly

This Competency Standard Unit is published at www.training.gov.au.

When delivering the CSU, the following VESI requirements including the learning outcomes and assessment criteria shall be undertaken.

Delivery This Competency Standard Unit shall be delivered by an RTO

for initial, competency assessment and refresher training.

Module purpose This module provides the learner with the knowledge and

> skills required to perform overhead energised low voltage work. This does not include the connection of overhead

services

For whom For Lineworkers Qualified and Licenced to perform energised

LV work

Frequency Three yearly

The Green Book **Summary of content**

- Industry work practices and procedures
- Live LV Safe work practices which may include working from EWP's or ladders
- Hazard and risk assessment process
- Use, inspection and care of tools, equipment, and PPE
 - Insulating mats/sleeves
 - Temporary bridging devices/hopper
 - Insulating gloves
 - ~ Tensioning devices
 - Pole shrouds
- 8 most important things for working on live LV
- Safety observer role and responsibilities
 - ergonomics
 - distraction
 - communication
- Conductive Structures Procedures
 - Personal separation/body position
 - Cables on conductive poles
 - ~ Tram/Train structures
 - Traction Electrolysis Cables
 - ~ Roofs/verandas
 - ~ Communications cables/catenaries
 - Supervisory Cables
- Practical Demonstration

Working on energised low voltage overhead electrical apparatus - UETDRMP012

Learning outcomes	On successful completion of the module the learner should be able to:		
Learning outcome 1	Identify the policy, safety instructions and general safe work practices and procedures for live LV work		
Assessment criteria	1.1 Identify and explain various clauses within The Green Book relating to working on Live Low Voltage		
	1.2 Describe the risk assessment process and identify and document the risks and controls appropriate to the task		
	1.3 Identify the general safe work practices for working on live low voltage		
	1.4 Describe the correct set up for a rescue situation		
Learning outcome 2	Plan, prepare and carry out Live LV electrical work		
Assessment criteria	2.1 Identify and document the risks and controls appropriate to the task		
	2.2 Identify and correctly use personal protective equipment (PPE) and safety equipment for working on live low		

voltage apparatus

LV work

2.4 Prepare work site to enable work to be performed in a safe manner, and in accordance with regulatory requirements

2.3 Identify and inspect the appropriate tools used for live

- 2.5 Demonstrate the "8 most important things" when working on Live LV appropriate to the work location
- 2.6 Demonstrate the correct setup for a rescue situation
- 2.7 Perform appropriate work methods to replace/install LV electrical apparatus and associated hardware with conductors energised
- 2.8 Demonstrate the safe working practices and procedures associated with working on live low voltage apparatus
- 2.9 Completed work is checked for compliance against workplace requirements

Identify precautions required for working safely on conductive structures

Assessment criteria

- 3.1 Identify the associated risks in regards to conductive structures
 - Cables on conductive poles
 - Tram/Train structures
 - Traction Electrolysis Cables
 - Roofs/verandas
 - Communications cables/catenaries
 - Supervisory Cables
- 3.2 Describe the principles of personal separation
- 3.3 Describe the work practices for work performed on or near conductive structures

Learning outcome 4

Identify the requirements and responsibilities of a Safety Observer in relation to LV Live work

- 4.1 Identify the roles and responsibilities of a safety observer/s during a Live LV task
- 4.2 Identify environmental influences that may contribute to distraction of a safety observer
- 4.3 Identify the ergonomic requirements in relation to the positioning of the safety observer to be and remain effective
- 4.4 Identify methods of communication between the safety observer and the Live LV worker/s
- 4.5 Demonstrate an understanding of the importance of accepting safety instruction & warnings from a safety observer

This Competency Standard Unit is published at www.training.gov.au.

When delivering the CSU, the following VESI requirements including the learning outcomes and assessment criteria shall be undertaken.

Delivery This Competency Standard Unit shall be delivered by an RTO

for initial, competency assessment and refresher training.

Module purpose This module provides the learner with the knowledge and

skills required to perform underground energised low voltage work. This does not include the connection of underground

services

For whom For workers Qualified and Licenced to perform energised LV

cable jointing

Frequency 3 Yearly

Summary of content • The Green Book

Industry/enterprise work practices and procedures

Live LV cable jointing work practices and procedures

Live LV work at Ground level work practices and procedures

Hazard and risk assessment process

Use, inspection and care of tools, equipment, and PPE

~ Insulating mats and covers

~ Insulating gloves

Safety observer role and responsibilities

~ ergonomics

~ distraction

~ communication

Cable testing procedures

Safety with LPG equipment

Conductive Structures Procedures

~ Personal separation/body position

~ Cables on conductive poles/structures

~ Communications cables/catenaries

Practical demonstration

On successful completion of the module the learner should

be able to:

Learning outcome 1

Identify the general safe work practices and procedures for live LV cable jointing

Assessment criteria

- Identify and explain the clauses within The Green Book relating to working on Live Low Voltage
- 1.2 Describe the risk assessment process and identify and document the risks and controls appropriate to the task
- 1.3 Describe the set up for a rescue situation

Learning outcome 2

Plan and prepare for Live LV electrical work

- 2.1 Obtain and correctly interpret all relevant procedures in preparation of performing the work
- 2.2 Identify and interpret all technical drawings required to complete the task
- 2.3 Identify the personal protective equipment (PPE) and safety equipment for live LV work
- 2.4 Identify the resources required including plant, tools, and equipment
- 2.5 Prepare work site to enable work to be performed in a safe manner, and in accordance with regulatory requirements
- 2.6 Identify the tasks that can be carried out using live work techniques
- 2.7 Identify the safe working practices and procedures associated with working on live low voltage apparatus

Demonstrate the work practice for jointing and testing live low voltage underground cables

Assessment criteria

- 3.1 Prepare cable in accordance with industry jointing practices
- 3.2 Demonstrate the correct setup for a rescue situation
- 3.3 Demonstrate a Live LV cable joint using the appropriate workplace procedures
- 3.4 Demonstrate the safe working practices and procedures associated with working on live low voltage apparatus
- 3.5 Conduct an insulation resistance and continuity test
- 3.6 Conduct a polarity and Neutral and Supply Test (NST) where required
- 3.7 Conduct a phase sequence test where required
- 3.8 Completed work is checked for compliance against workplace requirements

Learning Outcome 4

Identify precautions required for working safely on conductive structures

Assessment criteria

- 4.1 Identify the associated risks in regards to conductive structures
 - Cables on conductive poles/structures
 - ~ Roofs/verandas
 - Communications cables/catenaries
- 4.2 Describe the principles of personal separation
- 4.3 Describe the work practices for work performed on or near conductive structures

Learning outcome 5

Identify the requirements and responsibilities of a Safety Observer in relation to LV Live work

- 5.1 Identify the roles and responsibilities of a safety observer/s during a Live LV task
- 5.2 Identify environmental influences that may contribute to distraction of a safety observer
- 5.3 Identify the ergonomic requirements in relation to the positioning of the safety observer to be and remain effective
- 5.4 Identify methods of communication between the safety observer and the Live LV worker/s
- 5.5 Demonstrate an understanding of the importance of accepting safety instructions & warnings from a safety observer

Initial Training

ESI safety rules for work on, near or in the vicinity of electrical apparatus - UETDRMP002

This Competency Standard Unit is published at www.training.gov.au

When delivering this CSU, the following VESI requirements which include the learning outcomes and assessment criteria, shall also be undertaken.

Delivery

This Competency Standard Unit shall be delivered by an RTO

Module purpose

This unit provides the learner with the knowledge and application of Electrical Supply Industry (ESI) safety rules and codes of practice for work on, near or in the vicinity of ESI electrical apparatus. It includes the Victorian Electrical Supply Industry (VESI) safety rules, and organisational workplace requirements.

Frequency

Initial Only

Summary of content

- Code of Practice on Electrical Safety for work on or near high voltage (The Blue book)
- Electrical Safety Rules for the VESI Distribution Networks (The Green Book)
 - Scope
 - **Training Standards**
 - **Definitions**
 - Clause Principles and The Clauses of the Blue/Green Book
- Hazard and risk assessment process
- Personal Protective Safety Equipment
- Role and responsibility of the "Safety Observer"
- Safe Approach Distances to high and low voltage apparatus in regard to:
 - ~ Personal clearances (Normal and Special)
 - ~ Vehicles
 - Mobile plant
 - ~ Insulated Mobile Plant
- **Emergency Response**
- Requirement for Access Authorities

Identify ESI safety rules, codes of practice for the VESI Distribution networks

Assessment criteria

- 1.1 Identify the relevant ESI safety rules and Code of Practice
- 1.2 Explain the hierarchy of ESI safety rules, Code of Practice and guidelines

Learning outcome 2

Identify and explain relevant definitions and clauses within the Blue/Green book on safety, training and authorisations

Assessment criteria

- 2.1 Identify and explain the purpose and scope of the Blue/Green book
- 2.2 Identify and explain the relevant definitions related to persons working on, near or in the vicinity of electrical apparatus in the Victorian Electrical Supply Industry
- 2.3 Identify and explain the relevant key clauses related to persons working on, near or in the vicinity of electrical apparatus in the Victorian Electrical Supply Industry
- 2.4 Identify and explain the personal protective equipment (PPE) required for persons working on, near or in the vicinity of electrical apparatus in the Victorian Electrical Supply Industry
- 2.5 Identify and explain the relevant clause and response requirements for emergency situations in the Blue/Green book and relevant organisational procedures

Learning outcome 3

Identify the requirements of performing a risk assessment (JSA) to determine possible workplace hazards and assigning appropriate risk control measures

- 3.1 State the purpose of performing a JSA
- 3.2 Identify and explain the relevant clauses of the Blue/Green book in regards to workplace hazard identification, risk assessment and control requirements
- 3.3 Describe the process of hazard identification and the allocation of suitable risk control measures to overcome the identified risk

Identify the clauses and explain the role of the Safety Observer from the Blue/Green book

Assessment criteria

- 4.1 Identify and explain the relevant clause and definition that describes the role and responsibilities for the use of Safety Observers:
 - ~ Live work
 - ~ Mobile Plant

Learning outcome 5

Identify the requirements for the Safe Approach to Electrical Apparatus within the Victorian Electrical Supply Industry

Assessment criteria

- 5.1 Identify and explain the clause within The Blue Book and/or The Green Book relating to the Safe Approach to Electrical Apparatus
- 5.2 Identify and explain clauses within The Blue Book and/or The Green Book relating to the application of Safe Approach Distance for:
 - ~ Persons
 - ~ Vehicles
 - ~ Mobile Plant
 - Uninsulated
 - Insulated
- 5.3 Identify and explain the clause within the Green book relating to the application of SAD to HV and LV apparatus for persons who only hold Authorised Entry to Enclosures

Learning outcome 6

Identify the SAD for persons working on or near HV and LV electrical apparatus and the safe use of vehicles or mobile plant

- 6.1 Identify the SAD to HV and LV apparatus for:
 - ~ Persons
 - ~ Vehicles
 - ~ Mobile Plant
 - Uninsulated
 - Insulated

Learning outcome 7 Identify the requirements for SAD special

Assessment criteria 7.1 Identify the requirements for the use of SAD Special

> 7.2 Identify the SAD special to high voltage apparatus and who can apply SAD special

> Identify the control measures used when applying SAD 7.3 special

7.4 Identify the approved tasks authorised persons can apply SAD special

*Learning outcome 7 is only required for workers undertaking Distribution overhead work

Learning outcome 8 Identify and explain actions to undertake in an emergency

from the Blue/Green book

Assessment criteria Identify and explain emergency response requirements

Learning outcome 9 Describe the purpose and application of the various VESI

access forms

9.1 Identify and explain clauses within The Blue or Green Assessment criteria

Book relating to the access of HV and LV electrical

apparatus

9.2 Identify and explain the requirement and reasons for

and use of the Electrical Access Permits

9.3 Identify the various VESI access forms and their relationship to the Electrical Access Permit (EAP)

9.4 Identify the five (5) Network Authority types that are

covered in the Blue/Green book

Install and replace energy meters and associated equipment - UETDRIS014

This Competency Standard Unit is published at www.training.gov.au

Frequency Initial only

Delivery This Competency Standard Unit shall be delivered by an RTO

VESI Asbestos Containing HRC Fuse Identification, Removal and Handling

Module purpose

This module provides the learner with the underpinning knowledge to understand key principles on how to safely identify, remove and handle high-rupturing capacity (HRC) fuses whilst mitigating the risk of asbestos exposure on VESI networks.

This module can be used for both refresher training and initial training.

Pre-requisite

Training currency in VESI Environmental & Safety Framework modules is required prior to completion of this module.

For whom

All VESI workers who are required to carry out tasks involving HRC fuses.

Frequency

Initial only

Summary of content

- Legislation and WorkSafe's Determination requirements.
- Asbestos Containing Material (ACM) in HRC Fuses
- Planning and preparing for HRC fuse removal
- Selection, inspection and use of PPE for ACM-related work
- Safe work practice for the removal of HRC fuses
- Decontamination and disposal requirements

Learning outcomes

On successful completion of this module the learner should be able to:

Learning outcome 1

Identify occupational health and safety legislation, compliance codes, licensing, WorkSafe's Determination, organisational procedures and VESI guides associated with the removal of HRC fuses that contain Asbestos Containing Material (ACM)

- 1.1 Identify the regulatory requirements for the safe handling of HRC fuses within the work environment identified as being an asbestos risk
- 1.2 Explain the outcome of the WorkSafe determination for the removal of HRC fuses that contain ACM
- 1.3 Identify the resources that can be referred to for safe work practices for the removal of HRC fuses

VESI Asbestos Containing HRC Fuse Identification, Removal and Handling

Learning outcome 2	dentify various HRC fuse types and compositio VESI that have tested positive for ACM and whather the release of the AC		
Assessment criteria	2.1 Describe where the ACM is likely to be wit fuse	hin a HRC	
	2.2 Identify the different types of HRC fuses th contain ACM	at may	
	2.3 Describe what can lead to the release of A HRC fuse	.CM within a	
Learning outcome 3	Plan and prepare for the removal of HRC fuses contain ACM	that may	
Assessment criteria	3.1 Identify and document the risks and contro and dispose of a HRC fuse that is likely to		
	3.2 Identify the safe work practice to be used to dispose of a HRC fuse that may contain A		
	3.2 Identify the tools, equipment and asbestos protective equipment (PPE) consistent with requirements to carry out the task		
Learning outcome 4	Carry out HRC fuse removal		
Assessment criteria	4.1 Describe the requirements for the implementation barriers and designating boundaries for the HRC fuse		
	4.2 Describe how to fit and check respiratory ρ equipment (RPE) and asbestos PPE for the		
	4.3 Describe the process for the removal of the using the appropriate safe work practice	e HRC fuse	
	4.4 Identify the process for the removal of the and any associated equipment	HRC fuse	
Learning outcome 5	Describe the decontamination process		
Assessment criteria	5.1 Describe the process for the removal of the PPE and RPE and bag as required	e asbestos	
	5.2 Describe the process for the decontaminat and equipment as required	tion of tools	
	5.3 Describe the process for the inspection of the removal of barricades as required	the area and	
Learning outcome 6	Disposal of PPE and materials that are likely to contaminated by or contain ACM	be	

Assessment criteria

6.1 Identify the safe transportation and disposal requirements of the bagged items

Work safely in the vicinity of live electrical apparatus as a non-electrical worker -**UETDREL006**

This Competency Standard Unit is published at www.training.gov.au

Frequency Initial only

Delivery This Competency Standard Unit shall be delivered by an RTO

Special Reader

Module purpose: This module provides the learner with the knowledge and

skills to safely perform Special Meter Reader duties

This module can be used for both refresher training and initial

training

For whom: Special Readers

Frequency: Initial Only

Delivery: Shall be delivered by a training organisation approved by the

Network Operator

Summary of content:

- Network Operator, VESI and Australian Standards,
- Basic Electrical Theory
- Distribution systems of supply
- Working safely near live electricity
 - ~ Correct use of PPE
 - ~ JSA's and SWMS
 - Correct Circuit identification
 - Hazardous and illegal wiring
 - Alternate supplies
- Premise identification
 - Single/multiple occupancy
 - Network Operator Service and/or Trouble Order procedures
- Circuit protection
 - Correct fuse type and size
- Meter types and meter arrangements
 - ~ Electromechanical
 - ~ Electronic
 - Advanced Metering Infrastructure
 - CT Metering
 - Meter enclosures and power industry keys
 - Customer equipment (contactors, CB's SCCD's)
- Tariff standards
 - Metrology procedures
- Isolation processes
 - Isolation methods, fuse extraction sticks
 - No access to isolation points
 - Isolation confirmation

Summary of content (cont.):

- Meter reading
 - Electromechanical
 - Electronic
 - Advanced Metering Infrastructure
- Record keeping
 - Portable data entry devices
- Re-energisation processes
 - Re-connection confirmation e.g. meter rotation
- Security of metering equipment
 - Meter tampering
 - Sealing equipment

Learning outcomes

On successful completion of this module the learner should be able to:

Learning outcome 1

Identify the relevant Australian Standards, VESI and Network Operator procedures related to the Special Reader role

Assessment criteria

- Identify and explain various clauses within relevant 1.1 industry standards
- 1.2 Describe the risk assessment process and identify and record the risks and controls associated with the Special Reader function
- 1.3 Describe the Network Operator work instructions and safety standards

Learning outcome 2

Understand the basics of electrical theory and Victorian electricity distribution systems

Assessment criteria

- Describe the basics of Ohms Law and the principles of circuit protection
- 2.2 Explain what is meant by duty of care
- 2.3 Demonstrate an understanding of Victorian low voltage service connections including overhead and underground, single and multi-phase connections including correct circuit identification
- 2.4 Describe the effect that electricity has on the human body

Learning outcome 3	Understand the minimum requirements to ensure worker safety at customer installations
Assessment criteria	3.1 Correctly identify and select the personal protective equipment (PPE) for the task
	3.2 Identify the risks and controls appropriate to the task (SWMS and JSA)
	3.3 Prepare work site to enable work to be performed in a safe manner, and in accordance with Network Operator requirements
	3.4 Correctly identify the reporting requirements for illegal and/or hazardous wiring arrangements
	3.5 Identify the types of alternate supplies and describe the hazards they can create
Learning outcome 4	Be able to correctly identify a customer premises
Assessment criteria	4.1 Correctly identify installations within a single and or multiple occupancy arrangement
Learning outcome 5	Identify the different types of meter arrangements and the and customers equipment
Assessment criteria	5.1 Identify the correct fuse sizes for the different types of installation arrangements
	5.2 Identify and describe all meter types used by the Network Operator
	5.3 Describe differing types of meter enclosures and the correct use of Power Industry keys
	5.4 Describe the differing types of customer equipment found in meter enclosures
Learning outcome 6	Describe the purpose of tariffs and the differing types according to Victorian Metrology Procedures
Assessment criteria	6.1 Demonstrate an understanding of tariff types

6.2

customer premises

Identify and ensure correct tariffs are applied at

Learning outcome 7	Demonstrate effective isolation processes to ensure safe work
Assessment criteria	7.1 Identify the correct isolation point for various installation types
	7.2 Demonstrate correct isolation procedures and confirm isolation
	7.3 Describe the process to respond to no access to isolation points
Learning outcome 8	Demonstrate an understanding of various meter reading methods
Assessment criteria	8.1 Demonstrate the ability to accurately read all relevant meter types
Learning outcome 9	Demonstrate effective record keeping methods
Assessment criteria	9.1 Demonstrate correct and accurate record maintenance according to Network Operator requirements
	9.2 Demonstrate an ability to read and respond to Network Operator Service and Trouble Orders
Learning outcome 10	Demonstrate effective re-energisation processes
Assessment criteria	10.1 Identify and demonstrate the correct re-energisation point for various installation types
	10.2 Demonstrate correct re-energisation procedures and confirm re-connection
Learning outcome 11	Demonstrate effective record keeping methods
Assessment criteria	11.1 Demonstrate the purpose and correct method and tools to undertake sealing of Network Operator equipment

Appendix 3 – Version Control

DATE	VERSION	AMENDMENT	NAME
		Training Guideline	
		Updated section 9 Delivery of Training - Competency assessment /Refresher training dot point 2:	
		 Added requirements for the utilisation of Certificate IV in Training and Assessment skill sets 	
		 Updated wording for RTO to ensure when delivering units of competencies they have them on their scope of registration and the trainer is able to demonstrate vocational competence and experience in the subject matter 	
		Appendix 1 – Skills and Training Matrix Role Descriptions	
		Updated Auditor General role to include wording - Drone operators not engaged in performing the Asset Inspection role	
İ		Appendix 2 - Training Modules / Competency Standard Unit	
		Updated Testing of connections to low voltage electricity networks UETDRMP011	
		 Added a paragraph in regards to assessment requirements for workers 	
July 2024	11	 Updated Testing procedures names in Table 1 to reflect the changes to the Installation Supply Connection Tests & Procedures manual 	STRC
		Updated ESI safety rules for work on, near or in the vicinity of electrical apparatus – UETDRMP002 to include:	
		The VESI requirements to be completed in conjunction with the unit of competence	
		Added new training module VESI Asbestos Containing HRC Fuse Identification, Removal and Handling	
		Training Matrix	
		Included new VESI training module VESI Asbestos Containing HRC Fuse Identification, Removal and Handling	
		Removed VESI Lineworker Rigging Course as not required for the new WorkSafe exemption D19/7322/12	
		Removed VESI Lineworker Rigging Skills Verification as not required for the new WorkSafe exemption D19/7322/12	
		Added new VESI Lineworker Rigging D19/7322/12 training to meet the requirements of the new WorkSafe exemption D19/7322/12 (initial Training)	

December	10	Training Guideline	STRC
2022		Inclusion of reference to the VESI Vegetation Skills and Training matrix in section 4	
		General updates of wording	
		Removed reference to Lineworker Registration	
		Updated section 7 on Electrical Licensing	
		Updated section 10 Training and Assessment requirements	
		Updated section 9 delivery requirements	
		Removed section on ESI Passport	
		Added section 13 on the ESI worker system	
		Update to section 15 Definitions	
		Skills and Training Matrix Role Descriptions. Added the role of:	
		Civil worker – Zone and Terminal Substation	
		Supervisor / Team Leader – Stations	
		Terminal and Zone Substation Transformer Technician	
		Lineworker Distribution HV Live Work	
		Appendix 2 – Training Modules / Competency Standard Units:	
		 Added frequency headings (annual, 3 yearly and Initial). Alphabeltilised all Competency/module headings Updated National Qualification and Units of Competence names 	
		 and codes Updated the delivery requirements for the new mobility and portability (MP) units. These have replaced the refresher training units names, codes and delivery requirements 	
		Update to general wording and names Tosting of connections to low voltage electricity networks.	
		Testing of connections to low voltage electricity networks – UETTDRRF11A	
		Table 1 Added note ¹ in regards to mandatory test	
		requirements for Lineworkers	
		Added Assessment Criteria 2.5 to Learning outcome 2	
		- Enter Enclosures	
		 Added Assessment Criteria 3.3 to Learning outcome 3 In all classes of HV switching modules (RSO, DSO, DS, ZSS, TSF, 	
		TS) for Learning outcomes 2 & 4 the assessment criteria has	
		been updated to include pre-operation inspection and	
		associated hazards when operating switchgear	
		High Voltage (HV) Switching – DSO (Distribution Switching	
		Overhead)For Learning outcome 2 Assessment Criteria 2.7 has been	
		added	

DATE	VERSION	AMENDMENT	NAME
December 2022	10	TRAINING GUIDELINE (CONTINUED)	STRC
2022		 Added two new National Units of Competence to replace modules Live Low Voltage Work – Overhead and Live Low Voltage Work – Undergound: Working on energised low voltage overhead electrical apparatus UETDRMP012 Working on energised low voltage underground electrical apparatus UETDRMP013 	
		Training Matrix	
		Updated the National Qualification and Units of Competence names and codes	
		Added the new role of Lineworker Distribution HV Live Work	
		Added Lineworker Licences for Cable Jointer, Lineworker Distribution and Lineworker Transmission roles	
		Added competency unit UETDRIS014 - Install and replace energy meters and associated equipment for the Metering Technician role	
		Added two new National Units of Competence to replace modules Live Low Voltage Work – Overhead and Live Low Voltage Work – Undergound:	
		 Working on energised low voltage overhead electrical apparatus UETDRMP012 	
		 Working on energised low voltage underground electrical apparatus UETDRMP013 	
		UPDATED NAME OF HIGH VOLTAGE LIVE WORK - VEHICLE MOUNTED CRANE OPERATOR TO HIGH VOLTAGE LIVE WORK - VEHICLE LOADING CRANE OPERATOR	

DATE	VERSION	AMENDMENT	NAME
ovember 022	9	Updated the HV switching assessment criteria in Learning outcome 2 & 4 in all classes of HV switching to include pre-operation inspection and associated hazards when operating switchgear	STRC

DATE	VERSION	AMENDMENT	NAME
May 2017	8	TRAINING GUIDELINE	STRC
		Added new description for a Cable Hauler	
		Removed Restricted Cable Jointer role	
		Updated the VESI Environmental Framework content	
		Updated the Testing of connection to low voltage electricity networks module:	
		 to separate the delivery and assessment requirements made significant changes to Table 1 Added Learning outcome 2 - Identify the requirements for an electrical installation worker disconnecting or reconnecting a consumers mains or submains neutral and assessment criteria Added assessment criteria - Demonstrate an understanding of a Statement of Isolation Low Voltage (SILV) 	
		TRAINING MATRIX	
		Lay ESI electrical cables, removed reference to National Competency as requested by VEDN	
		High Risk Work Licences added for Dogging, Rigging, Crane and EWP	
		Created new role of Cable Hauler	
		Created Note 14 – refer to VEDN for training module content	
		Removed A (Additional) for the Advanced Diploma of ESI – Power Systems for the role of HV Switching Operator	
		Removed A (Additional) for Plant Operator in Receive Access Permits	
		Note 7 removed – "An existing worker, who was previously classified as a Cable Jointer (Restricted) shall obtain the Certificate III in ESI – Cable Jointing by July 2016" as there are no more Cable Jointer (Restricted) in the industry Changed the colour format to allow for an easy reference for a Role.	

DATE	VERSION	AMENDMENT	NAME
FEBRUARY	7	TRAINING GUIDELINE	STRC
2016		Added new Vegetation role descriptions for assessor and Specialist Plant Operator Added paragraph in clause 5 qualifications in regards to interstate workers Added note in training and assessment requirements. Records that indicate attendance only will not be accepted Added references to the following vesi documents that support this guideline: Apprentice / Trainee supervision, Interstate, Overseas and re-Entry guidelines Changed module name from High Voltage Live work pole replacement for pole erection recovery unit operators to High Voltage Live Work - Pole erection recovery unit (peru) operator Created new module, High Voltage Live Work - Vehicle Mounted Crane Operator Created new module, Safe Approach Distance — Vegetation work Added LV Perform low voltage switching operation to a given schedule — UETTDRIS43A as a prerequisite for HV switching RSO, DSO and DS Added note for Safe Approach Distances, Learning outcome 3 is only required for workers undertaking overhead work Updated Traffic Management training requirements to specify CSU: Control traffic with stop-slow bat - RIIWHS205D, Traffic Management: Implement traffic management plan - RIIWHS302D	
		Minor changes to the assessment criteria in the authority modules	
		TRAINING MATRIX	
		Changed module name to High Voltage Live Work - Pole Erection Recovery Unit (PERU) Operator and added Note 11	
		Updated Traffic Management training requirements to specify the Competency Standard Units	
		Updated the Certificate II in Asset inspection to the National Competency Standard Unit Code	
		Added Lay ESI Cables as an Additional requirement for the Civil Worker role when undertaking Cable Hauling, refer to Note 10	
		Added Make Application for to Additional for the No Go Zone Assessor role	
		Added Making LV Dead as Additional for the HV Switching Operator (Distribution) role	
		Added training module - High Voltage Live Work - Vehicle Mounted Crane Operator, refer to Note 12 for the Plant Operator role	
		Removed the requirement for Lineworker Registration as this is a non-mandatory requirement, applications will still be processed by Network Operators upon receipt, information on the Registration process is available on the ESV website	
		Removed the Vegetation Worker roles from the matrix and included a note to refer to the VESI Vegetation Management Guideline for all Vegetation training requirements	
		Removed Standard (AMI) Electrical Meter Installation 22001VIC in the Qualification section	
		Removed the role of Cable Jointer (Restricted) and added Note 7	

Removed LV Cable Jointing Certificate in the Qualification	
section	
Reordered the Notes to align with a logical order in the matrix	

DATE	VERSION	AMENDMENT	NAME													
NOVEMBER	6	TRAINING GUIDELINE	STRC													
2014		CREATED SECTION 4.1 APPRENTICES AND TRAINEES. ADDED THE MINIMUM ACCESS REQUIREMENTS FOR NEW APPRENTICES AND TRAINEES WHEN INITIAL VESI TRAINING IS DELAYED.														
		UPDATED THE TESTING OF CONNECTIONS TO LOW VOLTAGE ELECTRICITY NETWORKS DELIVERY REQUIREMENTS AND ADDED TABLE 1 OUTLINING THE REQUIRED TESTING PROCEDURES FOR APPLICABLE ROLES.														
		REVISED THE WORDING FOR THE PPE REQUIREMENTS THROUGHOUT THE DOCUMENT FOR CONSISTENCY														
		ADDED NEW TRAINING MODULES; MEASURING CONDUCTOR HEIGHTS USING TELESCOPIC MEASURING STICKS, SPECIAL READER AND MAKING LV DEAD														
		ADDED NEW LEARNING OUTCOMES FOR CONDUCTIVE STRUCTURES INTO MODULES LIVE LOW VOLTAGE (LV) WORK - CABLE JOINTING AND GROUND WORK														
			REMOVED LEARNING OUTCOME 3 ISOLATE, MAKE DEAD AND RESTORE SUPPLY TO A SECTION OF LV APPARATUS FROM LIVE LOW VOLTAGE (LV) WORK – OVERHEAD MODULE DUE TO THE CREATION OF NEW MODULE MAKING LV DEAD													
		TRAINING MATRIX														
		MADE TESTING OF CONNECTIONS MANDATORY FOR THE ELECTRICAL INSPECTOR ROLE														
		UPDATED CSU NUMBERS FOR THE FIRST AID UNITS														
		ADDED TESTING OF CONNECTIONS FOR ELECTRICAL INSPECTORS														
		ADDED TRAINING MODULE – MAKING LV DEAD														
		ADDED TRAINING MODULE - MEASURING CONDUCTOR HEIGHTS USING TELESCOPIC MEASURING STICKS														
NOVEMBER	5	TRAINING GUIDELINE	STRC													
2013		CHANGED THE NAME AND UPDATED REFERENCES FOR THE BLUE BOOK AND THE GREEN BOOK														
		SEPARATED SECTION 5 QUALIFICATIONS AND LICENSING / REGISTRATION														
															INCLUDED PARAGRAPH IN REGARDS TO THE REQUIREMENTS WHEN THE VESI UPDATE NATIONAL QUALIFICATION AND COMPETENCIES AND THERE UNIT NUMBERS.	
		ADDED DEFINITIONS FOR THE BLUE BOOK AND THE GREEN BOOK														
			ADDED NO GO ZONE ASSESSOR TO APPENDIX 1 – SKILLS AND TRAINING MATRIX ROLE DESCRIPTIONS													
		ADDED NEW COMPETENCY UNIT - UNDERTAKE RELEASE AND RESCUE FROM A TREE NEAR LIVE ELECTRICAL APPARATUS - UETTDRVC34A														

ADDED NEW LEARNING OUTCOME 1 TO SAFE APPROAC DISTANCE MODULE	Н
TRAINING MATRIX	
ADDED AERIAL RESCUE FOR TREE CLIMBERS	
INCLUDED SWITCHING CLASSES TO NOTE 16	
INCLUDED NO GO ASSESSOR ROLE AND TRAINING MODULE	
INCLUDED JEMENA TO NOTE 6 IN REGARDS TO SWER	

ATE	VERSION	AMENDMENT	NAME
JULY 2012	4	ADDED THE FOLLOWING TRAINING MODULES PREVIOUSLY IN THE VESI HV LIVE WORK RULES:	STRC
		HIGH VOLTAGE LIVE WORK POLE REPLACEMENT FOR POLE ERECTION RECOVERY UNIT OPERATORS	
		LIMITED HIGH VOLTAGE LIVE WORK (VEGETATION CONTROL)	
		CHANGED SERVICING PROCEDURES MODULE NAME TO THE NEW NATIONAL COMPETENCY STANDARD UNIT, TESTING OF CONNECTIONS TO LOW VOLTAGE ELECTRICITY NETWORKS – UETTDRRF11A	
		INCORPORATED THE TRAINING REQUIREMENTS FOR CONFINED SPACE	
		UPDATED THE TRAFFIC MANAGEMENT MODULES TO MEET NEW VIC ROADS TRAINING REQUIREMENTS	
		RIIOHS205A CONTROL TRAFFIC WITH A STOP/SLOW BAT	
		RIIOHS302A IMPLEMENT TRAFFIC MANAGEMENT PLAN OR EQUIVALENT	
		CHANGED NATIONAL QUALIFICATION AND COMPETENCY STANDARD UNIT (CSU) NAMES AND UNIT NUMBERS TO REFLECT THE CHANGE TO THE UET 12 NATIONAL TRAINING PACKAGE IN THIS GUIDELINE AND THE SKILLS & TRAINING MATRIX.	
		ADDED PREREQUISITE REQUIREMENTS FOR ALL HV SWITCHING MODULES	
		ADDED REFERENCE TO THE VESI MINIMUM RULES FOR CARRYING OUT HV LIVE WORK FOR COMPETENCY ASSESSMENT TIMEFRAMES	
		ADDED NOTE 16 TO THE SKILLS AND TRAINING MATRIX IN REGARDS TO HV SWITCHING AUTHORISATION TRAINING
